

S.P. Mandali's
Ramnarin Ruia Autonomous College
(Affiliated to University of Mumbai)

Syllabus for
Program: M.Sc. (Physics) (Electronics I)
Program Code: RPSPHY

(Credit Based Semester and Grading System with effect
from the academic year 2020-21)

PROGRAM OUTCOMES

PO	PO Description
	A student completing Master's Degree in Physics (Electronics-I) program will be able to:
PO 1	Demonstrate in depth understanding in the relevant science discipline. Recall, explain, extrapolate and organize conceptual scientific knowledge for execution and application and also to evaluate its relevance.
PO 2	Critically evaluate, analyze and comprehend a scientific problem. Think creatively, experiment and generate a solution independently, check and validate it and modify if necessary.
PO 3	Access, evaluate, understand and compare digital information from various sources and apply it for scientific knowledge acquisition as well as scientific data analysis and presentation.
PO 4	Articulate scientific ideas, put forth a hypothesis, design and execute testing tools and draw relevant inferences. Communicate the research work in appropriate scientific language.
PO 5	Demonstrate initiative, competence and tenacity at the workplace. Successfully plan and execute tasks independently as well as with team members. Effectively communicate and present complex information accurately and appropriately to different groups.
PO 6	Use an objective, unbiased and non-manipulative approach in collection and interpretation of scientific data and avoid plagiarism and violation of Intellectual Property Rights. Appreciate and be sensitive to environmental and sustainability issues and understand its scientific significance and global relevance.
PO 7	Translate academic research into innovation and creatively design scientific solutions to problems. Exemplify project plans, use management skills and lead a team for planning and execution of a task.
PO 8	Understand cross disciplinary relevance of scientific developments and relearn and reskill so as to adapt to technological advancements.

PROGRAM SPECIFIC OUTCOMES

PSO	Description
	A student completing Master's Degree in Physics (Electronics I) program in the subject of Physics will be able to:
PSO 1	To demonstrate procedural knowledge related to different areas of study in Physics including Quantum Mechanics, Nuclear Physics, Electronics, Microprocessor and Microcontroller, Embedded Systems and RTOS.
PSO 2	To demonstrate comprehensive, quantitative and conceptual understanding of the core areas of Physics and keeping update with current developments in the academic field of Physics.
PSO 3	To demonstrate the ability to use analytical skills in Physics and its related areas of technology to solve a wide range of problems including open ended problems associated with Physics.
PSO 4	Utilize contemporary experimental apparatus and analysis tools to acquire, analyze and interpret scientific data in the extents of Physics with reference to Research..
PSO 5	Plan and execute Physics-related experiments or investigations, analyze and interpret data collected using appropriate methods, and report accurately the findings relating to relevant theories of Physics.
PSO 6	Develop skills in areas related to specialization in the subfields of physics- Microprocessor, Microcontroller, VHDL, ARM7 and C++ (OOP).
PSO 7	Demonstrate communication skills, to present complex information in a concise manner and develop personal skills such as the ability to work both independently and in a group.

PROGRAM OUTLINE

YEAR	SEM	COURSE CODE	COURSE TITLE	CREDITS

S.P. Mandali's
Ramnarin Ruia Autonomous College
(Affiliated to University of Mumbai)

Syllabus for MSc-Part I-SEM-I & II

Program: M.Sc. (Physics) (Electronics I)

Program Code: RPSPHY

(Credit Based Semester and Grading System with effect from the academic year 2020-21)

Course Code: RPSPHY101
Course Title: Mathematical Methods
Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Learn the concepts of complex variables and analytic functions, and evaluate some improper integrals involving sine and cosine terms.
CO 2	Learn the basic properties of matrices, different types of matrices and its application to physical problems and also have the ability to find Eigen values and Eigen vectors of Matrices.
CO3	Learn some basic properties of tensors, their symmetric and antisymmetric nature, the Cartesian tensors, covariant, contra-variant and mixed tensors.
CO 4	Learn some basic Levi-Civita symbols which is used in various other courses.
CO 5	Learn the general treatment of second order differential equations with non-constant coefficients, and Power series solutions.
CO 6	Learn the four basic polynomials – Legendre, Bessel, Hermite and Laguerre polynomials.
CO7	Understand Integral transforms, Fourier transforms and its applications, Laplace transforms and its applications.

DETAILED SYLLABUS

Course Code	Unit	Title	Credits
RPSPHY101		Mathematical Methods	04
Unit I	I	Complex Variables, Limits, Continuity, Derivatives, Cauchy-Riemann Equations, Analytic functions, Harmonic functions, Elementary functions: Exponential and Trigonometric, Taylor and Laurent series, Residues, Residue theorem, Principal part of the functions, Residues at poles, zeroes and poles of order m, Contour Integrals, Evaluation of improper real integrals, improper integral involving Sines and Cosines, Definite integrals involving sine and cosine functions.	15 lectures
Unit II	II	Matrices, Eigenvalues and Eigen vectors, orthogonal, unitary and hermitian matrices, Diagonalization of Matrices, Applications to Physics problems. Introduction to Tensor Analysis, Addition and Subtraction of Tensors, summation convention, Contraction, Direct Product, Levi-Civita Symbol.	15 lectures
Unit III	III	General treatment of second order linear differential equations with non-constant coefficients, Power series solutions, Frobenius method, Legendre, Hermite and Laguerre polynomials, Bessel equations, Non-homogeneous equation, Green's function, Sturm-Liouville theory.	15 lectures
Unit IV	IV	Integral transforms: three dimensional Fourier transforms and its applications to PDEs (Green function of Poisson's PDE), convolution theorem, Parseval's relation, Laplace transforms, Laplace transform of derivatives, Inverse Laplace transform and Convolution theorem, use of Laplace's transform in solving differential equations.	15 lectures

Course Code: RPSPHY102
Course Title: Classical Mechanics
Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand formalism of Lagrange equation and D' Alembert's Principle, Hamilton's principle, variation principle. Its application to mechanics of particles.
CO 2	Comprehend Conservation theorems, Two-Body Central Force Problem, Scattering in a central force field.
CO3	Application of the differential equation to the problem of the orbit, The Kepler's problem: Inverse square law of force.
CO 4	Evaluate Legendre transformations and the Hamilton equations of motion
CO 5	Analysis of Small Oscillations using Eigen function and Eigen value
CO 6	Analysis of Equations of motion using concepts of Canonical Transformations and Poisson brackets.
CO7	Demonstrate problem solving skills in all above areas

DETAILED SYLLABUS

Course Code	Unit	Title	Credits
RPSPHY102		Classical Mechanics	04
Unit I	I	Review of Newton's laws, Mechanics of a particle, Mechanics of a system of particles, Frames of references, rotating frames, Centrifugal and Coriolis force, Constraints, D'Alembert's principle and Lagrange's equations, Velocity-dependent potentials and the dissipation function, Simple applications of the Lagrangian formulation. Hamilton's principle, Calculus of variations, Derivation of Lagrange's equations from Hamilton's principle, Lagrange Multipliers and constraint exterimization Problems, Extension of Hamilton's principle to non-holonomic systems, Advantages of a variational principle formulation,	15 lectures
Unit II	II	Conservation theorems and symmetry properties, Energy Function and the conservation of energy. The Two-Body Central Force Problem: Reduction to the equivalent one body problem, The equations of motion and first integrals, The equivalent one-dimensional problem and classification of orbits, The virial theorem, The differential equation for the orbit and integrable power-law potentials, The Kepler problem: Inverse square law of force, The motion in time in the Kepler problem, Scattering in a central force field, Transformation of the scattering problem to laboratory coordinates.	15 lectures
Unit III	III	Small Oscillations: Formulation of the problem, The eigenvalue equation and the principal axis transformation, Frequencies of free vibration and normal co-ordinates, Forced and damped oscillations, Resonance and beats. Legendre transformations and the Hamilton equations of motion, Cyclic coordinates and conservation theorems, Derivation of Hamilton's equations from a Variational principle.	15 lectures
Unit IV	IV	Canonical Transformations, Examples of canonical transformations, The symplectic approach to canonical transformations, Poisson brackets and other canonical invariants, Equations of motion, infinitesimal canonical transformations and conservation theorems in the Poisson bracket formulation, The angular momentum Poisson bracket relations.	15 lectures

 8. Classical Mechanics of Particles and Rigid Bodies, K. C. Gupta, Wiley Eastern (2001)
-

Course Code: RPSPHY103
Course Title: Quantum Mechanics-I
Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand the theory of quantum measurements, wave packets and uncertainty principle.
CO 2	Understand the concepts of quantum mechanics like wave - function, momentum and energy operators, the Schrodinger equation, time dependent and time independent cases, probability density and the normalization techniques, Commutator algebra, their connection to uncertainty principle, solution to the eigen value problems, etc.
CO3	Develop skills on problem solving for One dimensional rigid box, three-dimensional rigid box and Harmonic oscillator.
CO 4	Understand the formalism of modern quantum mechanics, Dirac notation, Hilbert space and matrix mechanisms.
CO 5	Learn the Schrodinger equation solutions for Hydrogen atom, determine its eigen value and radial eigen functions, degeneracy, etc.
CO 6	Understand the angular momentum operators, its Commutator relations, ladder operators, their eigen functions and eigen values, learn spin eigen functions, Pauli Spin matrices, and understand the addition of angular momentum.
CO7	Understand the Clebsch.-Gordon coefficients

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY103	Unit	Quantum Mechanics – I	04
Unit I	I	<p>1. Review of concepts:</p> <p>Postulates of quantum mechanics, observables and operators, measurements, state function and expectation values, the time-dependent Schrodinger equation, time development of state functions, solution to the initial value problem. The Superposition principle, Commutator relations, their connection to the uncertainty principle, complete set of commuting observables. Time development of expectation values, conservation theorems and parity.</p> <p>2. Formalism:</p> <p>Linear Vector Spaces and operators, Dirac notation, Hilbert space, Hermitian operators and their properties, Matrix mechanics: Basis and representations, unitary transformations, the energy representation. Schrodinger, Heisenberg and interaction picture.</p>	15 lectures
Unit II	II	<p>1. Wavepacket: Gaussian wave packet, Fourier transform.</p> <p>2. Schrodinger equation solutions: one dimensional problems:</p> <p>General properties of one dimensional Schrodinger equation, Particle in a box, Harmonic oscillator by raising and lowering operators and Frobenius method, unbound states, one dimensional barrier problems, finite potential well.</p>	15 lectures
Unit III	III	<p>Schrodinger equation solutions: Three dimensional problems:</p> <p>Orbital angular momentum operators in Cartesian and spherical polar coordinates, commutation and uncertainty relations, spherical harmonics, two particle problem-coordinates relative to centre of mass, radial equation for a spherically symmetric central potential, hydrogen atom, eigen-values and radial eigen-functions, degeneracy, probability distribution.</p>	15 lectures

Unit IV	IV	Angular Momentum: <ol style="list-style-type: none"> 1. Ladder operators, eigen-values and eigen-functions of L^2 and L_z using spherical harmonics, angular momentum and rotations. 2. Total angular momentum J; L-S coupling; eigen-values of J^2 and J_z. 3. Addition of angular momentum, coupled and uncoupled representation of eigen-functions, Clebsch-Gordan coefficient for $j_1=j_2=1/2$ and $j_1=1$ and $j_2=1/2$. 4. Angular momentum matrices, Pauli spin matrices, spin eigen-functions, free particle wave function including spin, addition of two spins. 	15 lectures

Course Code: RPSPHY104

Course Title: Solid State Physics

Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Get a brief idea about crystalline and amorphous substances, about lattice, unit cell, miller indices, reciprocal lattice, and concept of Brillouin zones and diffraction of x-rays by different crystalline materials.
CO 2	Gain knowledge of lattice vibrations the basics of the optical and acoustic phonons in crystals.
CO3	Understand about different types of magnetism like diamagnetism and paramagnetism. Quantum mechanical formulation of magnetism and application of Langevin diamagnetic equation.
CO 4	Learn about magnetic ordering: Ferromagnetic and Antiferromagnetic orders and Ferromagnetic domains.
CO 5	Carry out the experiments based on the theory that they have learned to measure carrier lifetime, magnetic susceptibility, and dielectric constant. They will also employ to four probe methods to determine electrical conductivity and the Hall setup to determine the hall coefficient of semiconductor.
CO 6	Demonstrate cautious problem solving skills in all above areas.

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY104	Unit	Solid State Physics	04
Unit I	I	<p>Diffraction of Waves by Crystals and Reciprocal Lattice Bragg law, Scattered Wave Amplitude – Fourier analysis, Reciprocal Lattice Vectors, Diffraction Conditions, Brillouin Zones, Reciprocal Lattice to SC, BCC and FCC lattice.</p> <p>Interference of Waves, Atomic Form Factor, Elastic Scattering by crystal, Ewald Construction, Structure Factor, Temperature Dependence of the Reflection Lines Experimental Techniques (Laue Method, Rotating Crystal Method, Powder Method) Scattering from Surfaces, Elastic Scattering by amorphous solids.</p>	15 lectures
Unit II	II	<p>Lattice Vibrations and thermal properties: Vibrations of Monoatomic Lattice, normal mode frequencies, dispersion relation. Lattice with two atoms per unit cell, normal mode frequencies, dispersion relation, Quantization of lattice vibrations, phonon momentum, Inelastic scattering of neutrons by phonons, Surface vibrations, Inelastic Neutron scattering. Anharmonic Crystal Interaction. Thermal conductivity–Lattice Thermal Resistivity, Umklapp Process, Imperfections.</p>	15 lectures
Unit III	III	<p>Diamagnetism and Paramagnetism: Langevin diamagnetic equation, diamagnetic response, Quantum mechanical formulation, core diamagnetism. Quantum Theory of Paramagnetism, Rare Earth Ions, Hund's Rule, Iron Group ions, Crystal Field Splitting and Quenching of orbital angular momentum; Adiabatic Demagnetisation of a paramagnetic Salt, Paramagnetic susceptibility of conduction electrons.</p>	15 lectures
Unit IV	IV	<p>Magnetic Ordering: Ferromagnetic order- Exchange Integral, Saturation</p>	15 lectures

		magnetisation Magnons, neutron magnetic scattering; Ferrimagnetic order, spinels, Yttrium Iron Garnets, Anti Ferromagnetic order. Ferromagnetic Domains – Anisotropy energy, origin of domains, transition region between domains, Blochwall, Coercive force and hysteresis.

M.Sc. (Physics) Practical Lab Course

Semester –I Lab-1

Course number: RPSPHYP101

Lab-1-Group A

	Experiment		Reference Books
1	Michelson Interferometer		Advanced Practical Physics -Worsnop and Flint
2	Analysis of sodium spectrum	A	Atomic spectra- H.E. White
		B	Experiments in modern physics – Mellissinos
3	h/e by vacuum photocell	A	Advance practical physics- Worsnop and Flint
		B	Experiments in modern Physics – Mellissinos
4	Study of He-Ne laser- Measurement of divergence and wavelength	A	A course of experiments with Laser- Sirohi
		B	Elementary experiments with Laser- G. White
5	Susceptibility measurement by Quincke's method /Guoy's balance method		Advance practical physics- Worsnop and Flint
6	Absorption spectrum of specific Liquids		Advance practical physics- Worsnop and Flint
7	Coupled Oscillations		HBCSE Selection camp 2007 Manual

Lab-1-Group B

Experiment	References
1 , Diac-Triac phase control circuit	a) Solid state devices- W.D.Cooper b) Electronic text lab manual- P.B.Zbar
2. Delayed linear sweep using IC 555	a) Electronic Principles - A. P. Malvino
3.Regulated power supply using IC LM-317 voltage regulator IC	a) Operational amplifiers and linear Integrated circuits –Coughlin & Driscoll
	b)Practical analysis of electronic circuits through experimentation- L.Mac Donald
4.Regulated dual power supply using IC LM-317 & IC LM-337 voltage regulator ICs	a) Operational amplifiers and linear Integrated circuits-Coughlin & Driscoll
	b) Practical analysis of electronic circuits through experimentation - L.MacDonald
5.Constant current supply using IC 741 and LM-317	Integrated Circuits - K. R. Botkar
6. Active filter circuits (second order)	a) Op-amps and linear integrated circuit technology- R.Gayakwad
	b)Operational amplifiers and linear integrated circuits - Coughlin & Driscoll
7.Study of 4 digit multiplex display system	Digital Electronics - Roger Tokheim

Note _1:

Minimum number of experiments to be performed and reported in the journal from Lab 1 group is = 06 with minimum 3 experiments from each Group i.e.GroupA:03 experiments and GoupB:03 experiments.

Semester –I Lab-2

Course number: PSPHP102

Lab-2-Group A

Experiment		References
1.	Carrier lifetime by pulsed reverse method	Semiconductor electronics by Gibson
2.	Resistivity by four probe method	Semiconductor measurements by Runyan
3.	Temperature dependence of avalanche and Zener breakdown diodes	a) Solid state devices-W.D.Cooper b) Electronic text lab manual-P B Zbar c) Electronic devices & circuits-Millman and Halkias
4.	DC Hall effect	a) Manual of experimental physics - E.V.Smith b) Semiconductor Measurements-Runyan c) Semiconductors and solid state physics-Mackelvy d) Handbook of semiconductors-Hunter
5.	Determination of particle size of lycopodium particles by laser diffraction method	a) A course of experiments with Laser-Sirohi b) Elementary experiments with Laser-G. White
6.	Magneto resistance of Bi specimen	Semiconductor measurements by Runyan
7.	Microwave oscillator characteristics	a)Physics of Semiconductor Devices by S.M. Sze

Lab-2-Group B

Experiment		References
1.	Temperature on-off controller using IC	a) Op-amps and linear integrated circuit technology by Gayakwad
2.	Waveform Generator using ICs	a) Operational amplifiers and linear integrated circuits- Coughlin & Driscoll b) Op-amps and linear integrated circuit technology: R. Gayakwad c) Operational amplifiers: experimental manual C.B. Clayton
3.	Instrumentation amplifier and its applications	a) Operational amplifiers and linear integrated circuits- Coughlin & Driscoll b) Integrated Circuits-K.R.Botkar
4.	Study of 8 bit DAC	a) Op-amps and linear integrated circuit technology- R. Gayakwad b) Digital principles and applications by Malvino and Leach.
5.	16 channel digital multiplexer	a) Digital principles and applications by Malvino and Leach. b) Digital circuit practice by R.P.Jain
6.	Study of elementary digital voltmeter	Digital Electronics by Roger Tokheim (5 th Ed,page371)

Note_2:

Minimum number of experiments to be performed and reported in the journal from Lab 2 group = 06 with minimum 3 experiments from each Group i.e. Group A:03 experiments and GroupB:03 experiments.

Note_3:

The students are required to present a duly certified journal with 6 experiments from Lab-1 and 6 experiments from Lab-2 and total minimum 12 experiments, for appearing at the practical examination.

Additional references:

1. Digital theory and experimentation using integrated circuits- Morris E.Levine (Prentice Hall).
2. Practical analysis of electronic circuits through experimentation- Lome Macronaid (Technical Education Press).
3. Logic design projects using standard integrated circuits- John F. Waker (John Wiley & sons).
4. Practical applications circuits' handbook - Anne Fisch.er Lent & Stan Miastkowski (Academic Press).
5. Digital logic design, a text lab manual- Anala Pandit (Nandu printers and publishers Pvt.

Ltd.)

Note:

1. Journal should be certified by the laboratory in-charge only if the student performs satisfactorily, the minimum number of experiments as stipulated above. Such students, who do not have certified journals, will not be allowed to appear for the practical examinations.
2. Total marks for the practical examinations = 200

The candidate shall prepare and submit for practical examination a certified Journal based on the practical course carried out under the guidance of a faculty member with minimum number of experiments as specified in the syllabus for each group.

RamnarainRuia Autonomous College

MODALITY OF ASSESSMENT

Theory Examination Pattern:

A) Internal Assessment - 40% = 40 Marks.

Sr. No	Evaluation type	Marks
1	One Assignment/Case study/Project	10
2	One class Test (multiple choice questions / objective)	20
3	Active participation in routine class instructional deliveries.	10
	TOTAL	40

B) External examination - 60 % Semester End Theory Assessment - 60 marks

- i. Duration - These examinations shall be of **2 & 1/2 hours** duration.
- ii. Paper Pattern:
 1. There shall be 5 questions each of 12 marks. On each unit there will be one question & last question will be based on all the 4 units.
 2. All questions shall be compulsory with internal choice within the questions.

Questions	Options	Marks	Questions on
Q.1)A)	Any 1 out of 2	8	Unit I
Q.1)B)	Any 1 out of 2	4	
Q.2)A)	Any 1 out of 2	8	Unit II
Q.2)B)	Any 1 out of 2	4	
Q.3)A)	Any 1 out of 2	8	Unit III
Q.3)B)	Any 1 out of 2	4	
Q.4)A)	Any 1 out of 2	8	Unit IV
Q.4)B)	Any 1 out of 2	4	
Q.5)	Any 4 out of 8	12	All four Units
	TOTAL	60	

Practical Examination Pattern:**External (Semester End Practical Examination):**

Semester – I : Practical Lab Course			
Course number	Group	Expt. type	Marks
RSPPHY101	Group A / B	Long	60
	Group A / B	Short	20
		Journal	10
		Viva	10
		Total	100
RSPPHY102	Group A / B	Long	60
	Group A / B	Short	20
		Journal	10
		Viva	10
		Total	100
	Total marks for practical examination		200

PRACTICAL BOOK/JOURNAL

The students are required to present a duly certified journal for appearing at the practical examination, failing which they will not be allowed to appear for the examination.

In case of loss of Journal and/ or Report, a Lost Certificate should be obtained from Head/ Coordinator / In-charge of the department on the basis of presenting record of lab readings in rough journal; failing which the student will not be allowed to appear for the practical examination. **Overall Examination and Marks Distribution Pattern**

Course	RSPPHY101 (Marks)			RSPPHY102 (Marks)			RSPPHY103 (Marks)			RSPPHY104 (Marks)			Total (Marks)
	Int.	Ext.	Total	I	E	T	I	E	T	I	E	T	
Theory	40	60	100	40	60	100	40	60	100	40	60	100	400

Course	RSPPHY101 (Marks)	RSPPHY102 (Marks)	Total (Marks)
Practicals	100	100	200

(GRAND TOTAL MARKS : 600)

Course Code: RPSPHY201
Course Title: Advanced Electronics
Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand the basics of Microprocessors & microcontroller with their programming
CO 2	Understand the basic concepts of Analog & Data acquisition system.
CO3	Understand the basic concepts of Analog and Digital transmissions and different types of modulations like Pulse Width Modulation, Time division multiplexing Pulse code modulation.
CO 4	Gain exposure to topic of optical fiber.
CO 5	Understand the basic concepts of Instrumentation Circuits and Designs involving Microprocessor/Microcontroller based DC motor speed controller, temperature controller, Electronic weighing single pan balance using strain gauge/ load cell.
CO 6	Demonstrate quantitative problem solving skill in all the topics covered.
CO7	Carry out the experiments based on Pulse width modulation for speed Control of dc toy motor, Study of sample and hold circuit, Study of 8085 microprocessor Kit and execution of simple Programmes, Linear Voltage Differential Transducer.

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY201	Unit	Advanced Electronics	04
Unit I	I	<p>Microprocessors and Microcontrollers:</p> <p>1. Microprocessors: Counters and Time Delays, Stack and Sub-routines. RSG: Microprocessor Architecture, Programming and Applications with the 8085 : R. S.Gaonkar, 5th Edition, Penram International</p> <p>2. Introduction to Microcontrollers: Introduction, Microcontrollers and Microprocessors, History of Microcontrollers and Microprocessors, Embedded versus External Memory Devices, 8-bit and 16-bit Microcontrollers, CISC and RISC Processors, Harvard and Von-Neumann Architectures, Commercial Microcontroller Devices. AVD: Ch.1</p> <p>3. 8051 Microcontrollers: Introduction, MCS-51 Architecture, Registers in MCS-51, 8051 Pin Description, Connections, 8051 Parallel I/O Ports and Memory Organization. AVD: Ch. 2, 3</p> <p>4. 8051 Instruction set and Programming: MCS-51 Addressing Modes and Instruction set. 8051 Instructions and Simple programs using Stack Pointer. AVD: Ch.4</p>	15 lectures
Unit II	II	<p>Analog and Data Acquisition Systems:</p> <p>1. Power Supplies: Linear Power supply, Switch Mode Power supply, Uninterrupted Power Supply, Step-up and Step-down Switching Voltage Regulators.</p> <p>2. Inverters: Principle of voltage driven inversion, Principle of current driven inversion, sine wave inverter, Square wave inverter.</p> <p>3. Signal Conditioning: Operational Amplifier, Instrumentation Amplifier using IC, Precision Rectifier, Voltage-to-Current Converter, Current-to-Voltage Converter, Op-Amp Based Butterworth Higher Order</p>	15 lectures

		Active Filters and Multiple Feedback Filters, Voltage Controlled Oscillator, Analog Multiplexer, Sample and Hold circuits, Analog-to-Digital Converters, Digital-to-Analog Converters.	
Unit III	III	Data Transmissions, Instrumentations Circuits & Designs: <ol style="list-style-type: none"> Data Transmission Systems: Analog and Digital Transmissions, Pulse Amplitude Modulation, Pulse Width Modulation, Time Division Multiplexing, Pulse Modulation, Digital Modulation, Pulse Code Format, Modems. Optical Fiber: Introduction to optical fibers, wave propagation and total internal reflection in optical fiber, structure of optical fiber, Types of optical fiber, numerical aperture, acceptance angle, single and multimode optical fibers, optical fiber materials and fabrication, attenuation, dispersion, splicing and fiber connectors, fiber optic communication system, fiber sensor, optical sources and optical detectors for optical fiber. 	15 lectures
Unit IV	IV	Instrumentation Circuits and Designs: Microprocessors/ Microcontrollers based D C motor speed controller. Microprocessors /Microcontrollers based temperature controller. Electronic weighing single pan balance using strain gauge/ load cell. Optical analog communication system using fiber link. Electronic intensity meter using optical sensor. IR remote controlled ON/OFF switch.	15 lectures

2. The 8051 Microcontroller and Embedded Systems, Dr. Rajiv Kapadia, Jaico Publishing House.
3. The 8051 Microcontroller & Embedded Systems by M.A. Mazidi, J.G. Mazidi and R.D. McKinlay
4. The 8051 Microcontroller: K.J. Ayala: Penram International
5. Programming & customizing the 8051 Microcontroller: Myke Predko, TMH
6. Power Electronics and its applications, Alok Jain, 2nd Edition, Penram

- International India.
7. Op-Amps and Linear Integrated Circuits R.A.Gayakwad, 3rdEdition Prentice Hall India.
 8. Operational Amplifiers and Linear Integrated Circuits, Robert F.Coughlin and Frederic F.Driscoll, 6thEdition, Pearson Education Asia.
 9. Optical Fiber Communications, Keiser, G.Mc Graw Hill, Int.StudentEd.
 10. Electronic Communication Systems; 4th.Ed. Kennedy and Davis, Tata-McGraw. Hill, 2004.
 11. Electronic Instrumentation, H.S.Kalsi, Tata-McGraw. Hill,1999
-

RamnarainRuia Autonomous College

Course Code: RPSPHY202
Course Title: Electrodynamics
Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand formalism of Maxwell's equations, Pointing vector. Its application to Lorentz Transformations.
CO 2	Comprehend concept of Four Vectors and Four Tensors.
CO3	Developing formalism of electromagnetic waves propagation and its application in wave guide and resonant cavity –related to fiber optics and laser
CO 4	Evaluate moving charges in vacuum and application of Leinard-Wiechert fields to fields-radiation from a charged particle, Antennas
CO 5	Analysis of moving charges with application to dipole radiation- electric and magnetic
CO 6	Application of relativity concepts to electrodynamics
CO7	Demonstrate problem solving skills in all above areas

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY202	Unit	Electrodynamics	04
Unit I	I	Maxwell's equations, The Poynting vector, The Maxwellian stress tensor, Lorentz Transformations, Four Vectors and Four Tensors, The field equations and the field tensor, Maxwell equations in covariant notation.	15 lectures
Unit II	II	Electromagnetic waves in vacuum, Polarization of plane waves. Electromagnetic waves in matter, frequency dependence of conductivity, frequency dependence of polarizability, frequency dependence of refractive index. Wave guides, boundary conditions, classification of fields in wave guides, phase velocity and group velocity, resonant cavities.	15 lectures
Unit III	III	Moving charges in vacuum, gauge transformation, The time dependent Green function, The Lienard-Wiechert potentials, Lienard-Wiechert fields, application to fields-radiation from a charged particle, Antennas, Radiation by multipole moments, Electric dipole radiation, Complete fields of a time dependent electric dipole, Magnetic dipole radiation	15 lectures
Unit IV	IV	Relativistic covariant Lagrangian formalism: Covariant Lagrangian formalism for relativistic point charges, The energy-momentum tensor, Conservation laws.	15 lectures

Main Reference:

Course Code: RPSPHY203
Course Title: Quantum Mechanics-II
Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand the Perturbation theory and the first and second order energy corrections, first order correction to wave function.
CO 2	Learn the degenerate perturbation theory, Fermi's Golden rule and their applications.
CO3	Learn other approximation methods like Variational Principle and WKB approximations, quantization conditions and their applications.
CO 4	Learn the Scattering theory – semi-classical theory, differential scattering cross section, scattering amplitude, partial wave analysis, etc.
CO 5	Understand the spherical attractive and repulsive potential wells, Born Approximation for One wall, Two walls and no walls.
CO 6	Understand the Identical Particles, the difference between energy levels for Bosons and Fermions, Pauli's exclusion principle, and the wave functions corresponding to Bosons and Fermions.
CO7	Learn Relativistic Quantum Mechanics, Klein Gordon coefficients and Dirac equations.

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY203	Unit	Quantum Mechanics – II	04
Unit I	I	Perturbation Theory: Time independent perturbation theory: First order and second order corrections to the energy eigen-values and eigen-functions. Degenerate perturbation Theory: first order correction to energy. Time dependent perturbation theory: Harmonic perturbation, Fermi's Golden Rule, sudden and adiabatic approximations, applications.	15 lectures
Unit II	II	Approximation Methods 1. Variation Method: Basic principle, applications to simple potential problems, He- atom. 2. WKB Approximation: WKB approximation, turning points, connection formulas, Quantization conditions, applications.	15 lectures
Unit III	III	Scattering Theory Laboratory and centre of mass frames, differential and total scattering cross-sections, scattering amplitude, Partial wave analysis and phase shifts, optical theorem, S-wave scattering from finite spherical attractive and repulsive potential wells, Born approximation.	15 lectures
Unit IV		1. Identical Particles: Symmetric and anti-symmetric wave functions, Bosons and Fermions, Pauli Exclusion Principle, Slater determinant. 2. Relativistic Quantum Mechanics 3. The Klein Gordon and Dirac equations. Dirac matrices, spinors, positive and negative energy solutions physical interpretation. Non-relativistic limit of the Dirac equation.	15 lectures

RamnarainRuia Autonomous College

Course Code: RPSPHY204
Course Title: Solid State Devices
Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand crystal structures of different intrinsic semiconductors their energy band diagrams, importance of Fermi level in Direct and indirect bandgap semiconductors.
CO 2	Study about P-N junction diodes its fabrication by different processes. Characteristics like I-V and C-V characteristics and evaluate the dependence of reverse saturation current on minority carrier concentration and forward diffusion current on potential barrier.
CO3	Learn about Metal- Semiconductor contacts like Schottky and Ohmic Contacts and its I-V and C-V characteristics
CO 4	Describe the principle and analyze the operation of Bipolar Junction Transistors, MOSFETs, MODFETs, MESFETs and study its I-V and C-V characteristics.
CO 5	Demonstrate cautious problem solving skills in all above areas.
CO 6	Carry out the experiments based on the theory that they have learnt to measure I-V, C-V characteristics on semiconductor specimen, carrier mobility by conductivity, barrier capacitance of a junction diode and Energy band gap.

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY204	Unit	Solid State Devices	04
Unit I	I	Classification of Semiconductors; Crystal structure with examples of Si, Ge & GaAs semiconductors; Energy band structure of Si, Ge & GaAs; Extrinsic and compensated Semiconductors; Temperature dependence of Fermi-energy and carrier concentration. Drift, diffusion and injection of carriers; Carrier generation and recombination processes- Direct recombination, Indirect recombination, Surface recombination, Auger recombination; Applications of continuity equation-Steady state injection from one side, Minority carrier surface, Haynes Shockley experiment, High field effects. Hall Effect; Four-point probe resistivity measurement; Carrier life time measurement by light pulse technique.	15 lectures
Unit II	II	Semiconductor Devices: - I p-n junction: Fabrication of p-n junction by diffusion and ion-implantation; Abrupt and linearly graded junctions; Thermal equilibrium conditions; Depletion regions; Depletion capacitance, Capacitance – voltage (C-V) characteristics, Evaluation of impurity distribution, Varactor; Ideal and Practical Current-voltage(I-V) characteristics; Tunneling and avalanche reverse junction breakdown mechanisms; Minority carrier storage, diffusion capacitance, transient behavior; Ideality factor and carrier concentration measurements; Carrier life time measurement by reverse recovery of junction diode; p- i-n diode; Tunnel diode, Introduction to p-n junction solar cell and semiconductor laser diode.	15 lectures
Unit III	III	Semiconductor Devices - II Metal–Semiconductor Contacts: Schottky barrier–Energy band relation, Capacitance- voltage (C-V) characteristics, Current-voltage(I-V) characteristics; Ideality factor, Barrier height and carrier concentration measurements; Ohmic contacts. Bipolar Junction Transistor (BJT): Static Characteristics; Frequency	15 lectures

		Response and Switching. Semiconductor hetero-junctions, Hetero-junction bipolar transistors, Quantum well structures.	
Unit IV	IV	Semiconductor Devices III: Metal-semiconductor field effect transistor (MESFET)- Device structure, Principles of operation, Current voltage (I-V) characteristics, High frequency performance. Modulation doped field effect transistor (MODFET); Introduction to ideal MOS device; MOSFET fundamentals, Measurement of mobility, channel conductance etc. from I_{ds} vs V_{ds} and I_{ds} vs V_g characteristics. Introduction to Integrated circuits.	15 lectures

M.Sc. (Physics) Practical Lab Course Semester –II

Semester –II Lab-1

Course number: RPSPHYP201

Lab-1 Group A

Experiment	References
1. Zeeman Effect using Fabry-Perotetalon /Lummer — Gehrecke plate	a)Advance practical physics- Worsnop and Flint b) Experiments in modern physics-Mellissinos
2.Characteristics of a Geiger Muller counter and measurement of dead time	a). Experiments in modern physics: Mellissions b). Manual of experimental physics --EV-Smith c).Experimental physics for students -Whittle& Yarwood
3. Ultrasonic Interferometry-Velocity measurements in different Fluids	Medical Electronics-Khandpur
4.MeasurementofRefractiveIndexof Liquids using Laser	Sirohi-A course of experiments with He-Ne Laser; Wiley Eastern Ltd
5.I-V/ C-V measurement on semiconductor specimen	Semiconductor measurements –Runyan
6.Double slit- Fraunhofer diffraction (missing order etc.)	Advance practical physics-Worsnop and Flint
7.Determination of Young's modulus Of metal rod by interference method	Advance practical physics-Worsnop and Flint (page 338)

Lab-1 Group B

Experiment	Reference
1. Adder-subtractor circuits using ICs	a) Digital Principles and applications-Malvino and Leach. b) Digital circuit practice-R.P.Jain
2. Study of Presettable counters- 74190 and 74193	a) Digital circuit practice- Jain & Anand b) Digital Principles and applications-Malvino and Leach. c) Experiments in digital practice- Jain & Anand
3. TTL characteristics of Totem pole, Open collector and tristate devices	a) Digital circuit practice- Jain & Anand b) Digital Principles and applications-Malvino and Leach.
4. Pulse width modulation for speed control of dc toy motor	Electronic Instrumentation - H. S. Kalsi
5. Study of sample and hold circuit	Integrated Circuits - K. R. Botkar
6. Switching Voltage Regulator	

Note_1:

Minimum number of experiments to be performed and reported in the journal= 06 with minimum 3 experiments from each Group i.e. GroupA:03 experiments and GroupB:03 experiments.

Semester –II Lab-2
Course number: RPSPHYP202

Lab-2 Group A

Experiment	References
1. Carrier mobility by conductivity	Semiconductor electronics - Gibson
2. Measurement of dielectric constant, Curie temperature and verification of Curie—Weiss law for ferroelectric material	a) Electronic instrumentation & measurement: W. D. Cooper b) Introduction to solid state physics-C.Kittel c) Solid state physics—A.J.Dekkar
3. Barrier capacitance of a junction diode	Electronic engineering – Millman Halkias
4. Linear Voltage Differential Transformer	Electronic Instrumentation - W.D. Cooper
5. Faraday Effect-Magneto Optic Effect: a) To Calibrate Electromagnet b) To determine Verdet's constant for KCl & KI solutions.	a) Manual of experimental physics:E.V.Smith b) .Experimental physics for students: Whittle & Yarwood
6. Energy Band gap by four probe Method	Semiconductor measurements — Runyan
7. Measurement of dielectric constant(Capacitance)	

Lab-2 Group B

Experiment	References
1. Shift registers	a) Experiments in digital principles- D.P.Leach. b) Digital principles and applications-Malvino and Leach.
2. Study of 8085 microprocessor Kit and execution of simple Programmes	a) Microprocessor Architecture, Programming and Applicationswiththe8085-R.S.Gaonkar b) Microprocessor fundamentals- Schaum Series- Tokheim c) 8085 Kit User manual
3.Wave form generation using 8085	a) Microprocessor Architecture, Programming and Applications with the 8085-R.S.Gaonkar b) Microprocessor fundamentals- Schaum Series- Tokheim
4. SID & SOD using 8085	a) Microprocessor Architecture, Programming and Applications with the 8085-R.S.Gaonkar b) Microprocessor fundamentals- Schaum Series- Tokheim c) 8085 Kit User manual
5.Ambient Light control power switch.	a) Electronic Instrumentation H.S.Kalsi b) Helfrick & Cooper, PHI
6.InterfacingTTLwithbuzzers, relays, motors and solenoids	Digital Electronics by Roger Tokheim

Note_2:

Minimum number of experiments to be performed and reported in the journal= 06 with minimum 3 experiments from each Group i.e.GroupA:03 experiments and GoupB:03 experiments.

Note_3:

The students are required to present a duly certified journal with 6 experiments from Lab-1 and 6 experiments from Lab-2 and total minimum 12 experiments, for appearing at the practical examination.

Additional references:

1. Digital theory and experimentation using integrated circuits- Morris E. Levine (Prentice Hall)
2. Practical analysis of electronic circuits through experimentation-Lome Macronaid (Technical Education Press)

3. Logic design projects using standard integrated circuits-John F. Waker(John Wiley &sons)
4. Practical applications circuits handbook - Anne Fischer Lent & Stan Miastkowski (Academic Press)
5. Digital logic design, a text lab manual- Anala Pandit (Nandu printers and publishers Pvt.Ltd.)

Note:

1. Journal should be certified by the laboratory in-charge only if the student performs satisfactorily the minimum number of experiments as stipulated above. Such students, who do not have certified journals, will not be allowed to appear for the practical examinations.
 2. Total marks for the practical examinations=200
-

MODALITY OF ASSESSMENT

Theory Examination Pattern:

B) Internal Assessment - 40% = 40 marks.

Sr. No	Evaluation type	Marks
1	One Assignment/Case study/Project	10
2	One class Test (multiple choice questions / objective)	20
3	Active participation in routine class instructional deliveries.	10
	TOTAL	40

B) External examination - 60 %

Semester End Theory Assessment - 60 marks

iii. Duration - These examinations shall be of **2 & 1/2 hours** duration.

iv. Paper Pattern:

- There shall be 5 questions each of 12 marks. On each unit there will be one question & last question will be based on all the 4 units.
- All questions shall be compulsory with internal choice within the questions.

Questions	Options	Marks	Questions on
Q.1)A)	Any 1 out of 2	8	Unit I
Q.1)B)	Any 1 out of 2	4	
Q.2)A)	Any 1 out of 2	8	Unit II
Q.2)B)	Any 1 out of 2	4	
Q.3)A)	Any 1 out of 2	8	Unit III
Q.3)B)	Any 1 out of 2	4	
Q.4)A)	Any 1 out of 2	8	Unit IV
Q.4)B)	Any 1 out of 2	4	
Q.5)	Any 4 out of 8	12	All four Units
	TOTAL	60	

Practical Examination Pattern:**External (Semester End Practical Examination):**

Semester – II : Practical Lab Course			
Course number	Group	Expt. type	marks
RPSPHYP201	Group A / B	Long	60
	Group A / B	Short	20
		Journal	10
		Viva	10
		Total	100
RPSPHYP202	Group A / B	Long	60
	Group A / B	Short	20
		Journal	10
		Viva	10
		Total	100
	Total marks for practical examination		200

PRACTICAL BOOK/JOURNAL

The students are required to present a duly certified journal for appearing at the practical examination, failing which they will not be allowed to appear for the examination.

In case of loss of Journal and/ or Report, a Lost Certificate should be obtained from Head/ Coordinator / In-charge of the department on the basis of presenting record of lab readings in rough journal; failing which the student will not be allowed to appear for the practical examination.

Overall Examination and Marks Distribution Pattern

Course	RSPPHY201 (Marks)			RSPPHY202 (Marks)			RSPPHY203 (Marks)			RSPPHY204 (Marks)			Total (Marks)
	Int.	Ext.	Total	I	E	T	I	E	T	I	E	T	
Theory	40	60	100	40	60	100	40	60	100	40	60	100	400

Course	RSPPHY201 (Marks)	RSPPHY202 (Marks)	Total (Marks)
Practicals	100	100	200

(GRAND TOTAL MARKS : 600)

S.P. Mandali's
Ramnarain Ruia Autonomous College
(Affiliated to University of Mumbai)

Syllabus for MSc- PART II-SEM-III & IV
Program: M.Sc. (Physics) (Electronics I)
Program Code: RPSPHY

(Credit Based Semester and Grading System with effect
from the academic year 2020-21)

Course Code: RPSPHY301

Course Title: Statistical Mechanics

Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand Statistical Basis of Thermodynamics, in particular Ensemble Theory.
CO 2	Developing formalism of Canonical Ensemble, analysis with partition function
CO3	Comprehend concept of statistics of Para-magnetism, thermodynamics of magnetic systems..
CO 4	Developing formalism of Grand Canonical Ensemble
CO 5	Exploring physical significance of statistical quantities-Density and energy fluctuations
CO 6	Formulation of Quantum Statistics- Statistics of the various ensembles
CO7	Demonstrate problem solving skills in all above areas

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY301	Unit	Statistical Mechanics	04
Unit I	I	<p>The Statistical Basis of Thermodynamics-The macroscopic and the microscopic states, contact between statistics and thermodynamics, the classical ideal gas, The entropy of mixing and the Gibbs paradox, the enumeration of the microstates. Elements of Ensemble Theory-Phasespace of a classical system, Liouville's theorem and its consequences.</p> <p>The micro-canonical ensemble - Examples Quantum states and the phase space</p>	15 lectures
Unit II	II	<p>The Canonical Ensemble-Equilibrium between a system and a heat reservoir, a system in the canonical ensemble, physical significance of the various statistical quantities in the canonical ensemble, expressions of the partition function, the classical systems, energy fluctuations in the canonical ensemble, correspondence with the microcanonical ensemble, the equipartition theorem and the virial theorem, system of harmonic oscillators, statistics of paramagnetism, thermodynamics of magnetic systems.</p>	15 lectures
Unit III	III	<p>The Grand Canonical Ensemble-Equilibrium between a system and a particle-energy reservoir, a system in the grand canonical ensemble, physical significance of the various statistical quantities, Examples, Density and energy fluctuations in the grand canonical ensemble, correspondence with other ensembles.</p>	15 lectures
Unit IV	IV	<p>Formulation of Quantum Statistics-Quantum-mechanical ensemble theory: the density matrix, Statistics of the various ensembles, Examples, systems composed of indistinguishable particles, the density matrix and the partition function of a system of free particles.</p> <p>Note: 50% of time allotted for lectures to be spent in solving problems.</p>	15 lectures

Course Code: RPSPHY302

Course Title: Nuclear Physics

Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand the all static properties of nuclei
CO 2	Formulate an expression for nuclear size, Deuteron problem and Fermi golden rule.
CO3	Acquire knowledge about the spin orbit interaction and selection rules.
CO 4	Differentiate between elementary particle and properties of neutrino.
CO 5	Compare and study of different nuclear models and nuclear reactions.
CO 6	Understand the basics of Quantum Electrodynamics and Quantum Chromodynamics .
CO7	Demonstrate quantitative problem solving skills in all the topics covered.

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY302	Unit	Nuclear Physics	04
Unit I	I	<p>All static properties of nuclei (charge, mass, binding energy, size, shape, angular momentum, magnetic dipole momentum, electric quadrupole momentum, statistics, parity, isospin), Measurement of Nuclear size and estimation of R_0 (mirror nuclei and mesonic atom method) Q-value equation, energy release in fusion and fission reaction.</p> <p>Deuteron Problem and its ground state properties, Estimate the depth and size of (assume) square well potential, Tensor for ceasan example of non-central force, nucleon-nucleon scattering-qualitative discussion on results, Spin-orbit strong interaction between nucleon, double scattering experiment.</p> <p>*Tutorials should include 3 problem solving session based on above mentioned topics</p>	15 lectures
Unit II	II	<p>(11 Lectures + 4 Tutorials)</p> <p>Review of alpha decay, Introduction to Beta decay and its energetic, Fermi theory: derivation of Fermi's Golden rule, Information from Fermi–curie plots, Comparative half- lives, selection rules for Fermi and G-T transitions.</p> <p>Gamma decay: Multipole radiation, Selection rules for gamma ray transitions, Gamma ray interaction with matter, and Charge-particle interaction with matter.</p> <p>*Tutorials should include 4 problem solving session based on above mentioned topics</p>	15 lectures
Unit III	III	<p>(11 Lectures + 4 Tutorials)</p> <ol style="list-style-type: none"> 1. Nuclear Models: Shell Model (extreme single particle): Introduction, Assumptions, Evidences, Spin-orbit interactions, Predictions including Schmidt lines, limitations, Collective model- Introduction to Nilsson Model. 2. Nuclear Reactions: Kinematics, scattering and reaction cross sections, Compound nuclear 	15 lectures

		<p>reaction, direct nuclear reaction.</p> <p>*Tutorials should include 4 problem solving session based on above mentioned topics</p>	
Unit IV	IV	<p>(11 Lectures + 4 Tutorials)</p> <p>Introduction to the elementary particle Physics, The Eight fold way, the Quark Model, the November revolution and aftermath, The standard Model, Revision of the four forces, cross sections, decays and resonances, Introduction to Quantum Electrodynamics, Introduction to Quantum Chromodynamics. Weak interactions and Unification Schemes (qualitative description), Revision of Lorentz transformations, Four-vectors, Energy and Momentum. Properties of Neutrino, helicity of Neutrino, Parity, Qualitative discussion on Parity violation in beta decay and Wu's Experiment, Charge conjugation, Time reversal, Qualitative introduction to CP violation and TCP theorem.</p> <p>*Tutorials should include 4 problem solving session based on above mentioned topics</p>	15 lectures

Course Title: Microcontrollers and Interfacing

Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand the basic architecture and the assembly language programming of 8051 controller & PIC microcontrollers
CO 2	Understand the basics of 8051 serial communication and serial port programming in assembly language
CO3	Understand the basic programming of the microcontroller with and without the interrupt service request.
CO 4	Acquire knowledge of microcontrollers and their role in I/O port programming and their interface with peripherals.
CO 5	Get exposure to the simulators and software which mimics the behaviour of a mainframe microcontrollers
CO 6	Demonstrate the practical utility of microcontrollers through experiments
CO7	In the laboratory course, student will gain hands-on experience of the working and applications of the microcontrollers.

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY303	Unit	Microcontrollers and Interfacing	04
Unit I	I	<p>8051 microcontroller: (Review of 8051), Timer /Counters, Interrupts, Serial communication</p> <p>Programming 8051 Timers, Counter Programming Basics of Serial Communication, 8051 Connection to RS232, 8051 Serial Port Programming in assembly. 8051 Interrupts, Programming Timer interrupts Programming External hardware Interrupts, Programming the Serial Communication Interrupt, Interrupt Priority in 8051/52.</p>	15 lectures
Unit II	II	<p>16C61/71 PIC Microcontrollers: Overview and Features, PIC 16C6X/7X, PIC Reset Actions, PIC Oscillator Connections, PIC Memory Organization, PIC 16C6X/7X Instructions, Addressing Modes, I/O Ports, Interrupts in PIC 16C61/71, PIC 16C61/71 Timers, PIC 16C71 Analog-to-Digital Converter.</p>	15 lectures
Unit III	III	<p>PIC 16F8XX Flash Microcontrollers: Introduction, Pin Diagram, STATUS Register, Power Control Register (PCON), OPTION Register, Program memory, Data memory, I/O Ports AVD – Ch. 10: 10.1, 10.2, 10.3, 10.4, 10.5, 10.6, 10.7, 10.10 Capture/Compare/PWM (CCP) Modules in PIC 16F877, Analog-to- Digital Converter AVD–Ch.11:11.1,11.2,11.5</p>	15 lectures
Unit IV	IV	<p>Interfacing microcontroller/PIC microcontroller and Industrial Applications of microcontrollers:</p> <p>Light Emitting Diodes (LEDs); Push Buttons, Relays and Latch. Connections; Keyboard Interfacing; Interfacing 7-Segment Displays; LCD Interfacing; ADC and DAC Interfacing with 89C51 Microcontrollers. Introduction and Measurement Applications (For DC motor interfacing and PWM refer Sec 17.3 of MMM)</p>	15 lectures

Course Title: Embedded Systems and RTOS

Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand the basic concepts of Embedded systems and Designs
CO 2	Understand the basic concepts of RTOs and Designs
CO3	Understand the assembly language programming
CO 4	Demonstrate quantitative problem solving skill in all the topics covered
CO 5	Understand the basic concepts of computers and programming
CO 6	Understand and demonstrate the various tools of C++ programming such. as Expressions and interactivity, Making decisions, Looping, Functions, Arrays, Sorting arrays, Pointers
CO7	Understand and demonstrate the class, Inheritance, polymorphism, virtual functions in C++ programming

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY304	Unit	Programming using C++, VC++, Embedded Systems and RTOS	04
Unit I	I	<p>Programming Using C++: Introduction to Computers and programming, Introduction to C++, Expressions and interactivity, Making decisions, Looping, Functions, Arrays, Sorting arrays, Pointers.</p> <p>TGCh.1:1.3to1.7, Ch.2:2.1to2.14, Ch.3:3.1to3.11, Ch.4:4.1to4.15, Ch.5:5.1to5.13, Ch. 6: 6.1 to 6.14, Ch. 7: 7.1 to 7.9 , Ch. 8: 8.3 , Ch. 9: 9.1 to 9.7.</p>	15 lectures
Unit II	II	<p>Introduction to classes: More about classes, Inheritance, polymorphism, virtual functions.</p> <p>TGCh.13:13.1to13.11, Ch.14:14.1to14.5, Ch.15:15.1 to15.6</p> <p>Introduction to VC++: YK – Ch. 1, 2, 3</p>	15 lectures
Unit III	III	<p>Embedded systems</p> <p>Introduction to Embedded Systems: What is an embedded system, Embedded System v/s General Computing System, Classification of Embedded Systems, Major Application Areas of Embedded Systems, Purpose of Embedded Systems, Smart Running Shoes.</p> <p>SKV – Ch. 1: 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7</p> <p>A Typical Embedded system: Core of the embedded system</p> <p>SKV–Ch.2:2.1</p> <p>Characteristics and quality Attributes of Embedded Systems: Characteristics of an Embedded System, Quality Attributes of Embedded Systems</p> <p>SKV – Ch. 3: 3.1, 3.2</p> <p>Embedded Systems-Application and Domain–Specific: Washing Machine, Automatic- Domain, Specific examples of embedded system</p> <p>SKV – Ch. 4: 4.1, 4.2</p> <p>Design Process and design Examples: Automatic Chocolate Vending machine (ACVM), Smart Card, Digital Camera, Mobile Phone, A Set of Robots</p>	15 lectures

		RK - Ch. 1: 1.10.2, 1.10.3, 1.10.4, 1.10.5, 1.10.6, 1.10.7	
Unit IV	IV	Real –Time Operating System based Embedded System Design: Operating system Basics, Types of Operating Systems, Tasks, Process and Threads, Multi-processing and Multitasking, Task Scheduling, Threads, Processes and Scheduling: Putting them altogether, task Communication, task Synchronizations, Device Drivers, How to choose an RTOS. SKV: Ch.–10: 10.1, 10.2, 10.3, 10.4, 10.5, 10.6, 10.7, 10.8, 10.9. 10.10	15 lectures

M.Sc. (Physics) Practical Lab Course
Semester –III- PSPHYP301-PROJECT
Semester –III- PSPHYP302-LAB
RPSPHYP302-LAB

Important Note

Students have to perform at least 10 experiments from Group A and Group B: with 5 each from group A and B and entered into journal for certification.

Student have to submit project report along with certified journal for semester end practical examination.

Group A

A-I Interfacing 8031 / 8051 based experiments:

1. Interfacing 8 bit DAC with 8031/51 to generate waveforms: square, saw-tooth, triangular.
2. Interfacing stepper motor with 8031/51: to control direction, speed and number of steps.
3. Interface 8-bit ADC (0804) with 8031/51: to convert an analog signal into its binary equivalent.

A-II Microcontroller 8031/8051 based experiments:

1. 8031/51 assembly language programming:
Simple data manipulation programs.(8/16-bit addition, subtraction, multiplication, division, 8/16-bit data transfer, cubes of nos., to rotate a 32-bit number, finding greatest/smallest number from a block of data, decimal/hexadecimal counter)
2. Study of IN and OUT port of 8031/51 by Interfacing switches, LEDs and Relays: to display bit pattern on LED's, to count the number of "ON" switches and display on LED's, to trip a relay depending on the logic condition of switches, event counter (using LDR and light source).
3. Study of external interrupts (INT0/INT1) of 8031/51.
4. Study of internal timer and counter in 8031/51.

Group B:

B-I 16F84 or 16FXXX PIC Micro-controller based experiments

(Using assembly language only):

1. Interfacing LED's: flashing LED's, to display bit pattern, 8-bit counter.
2. Interfacing Push Buttons: to increment and decrement the count value at the output by recognizing of pushbuttons, etc.
3. Interfacing Relay: to drive an AC bulb through a relay; the relay should be tripped on recognizing of a pushbutton.
4. Interfacing buzzer: the buzzer should be activated for two different

frequencies, depending on recognizing of corresponding pushbuttons.

B-II C++ and Visual C++ experiments:

1. C++ Program (Conversion from decimal system to binary, octal, hexadecimal system).
2. C++ Program (Program on mean, variance, standard deviation for a set of numbers).
3. C++ Program (Sorting of data in ascending or descending order).
4. C++ experiment (Programs on class, traffic lights)
5. C++ experiment (Programs on inheritance, overloading)
6. Visual C++ experiment.

Note:

Journal should be certified by the laboratory in-charge only if the student performs satisfactorily the minimum number of experiments as stipulated above. Such students, who do not have certified journals, will not be allowed to appear for the practical examinations.

Semesters III and IV- PSPHYP301 AND PSPHYP401 Project guidelines and evaluation

Every student will have to complete one long project for both semesters- Semester III and Semester IV with four credits (100 marks) in each semester, in subject –Electronics,/ Solid state electronics,/ solid state Physics,/ Material Science,/ Nanotechnology,/ Nuclear Physics.

Student have to submit two separate project reports of one long project for two semesters(III and IV)

In each semester, project will be of 100 marks with 50% by internal evaluation and 50% by external evaluation. In Semester III- student will complete theoretical aspects of the project- consisting of the problem definition, literature survey, current status, objectives, and methodology. **And in semester IV-** student will complete experimental part related to Project –actual experimental work, results and analysis.

In case of electronic projects, use of readymade electronic kits available in the market should be avoided. The electronics project / models should be demonstrated during presentation of the project.

Maximum three students can do a joint project. Each one of them will submit a separate project report with details of the part only he/she has done. However he/she can in brief (in a page one or two) mention in Introduction section what other group members have done.

In case a student takes training in a research institute/training of handling sophisticate equipment, he/she should mention in a report what training he/she has got, which instruments he/she handled and their principle and operation etc.

The project report should be file bound/spiral bound/hard bound and should have following format

Title Page/Cover page
 Certificate endorsed by Project Supervisor and Head of Department
 Declaration
 Abstract of the project
 Table of Contents
 List of Figures
 List of Tables
 Chapters of Content –
 Introduction and Objectives of the project
 Experimental/Theoretical Methodology/Circuit/Model etc. details
 Results and Discussion if any
 Conclusions
 References

Evaluation of Project by External/Internal examiner will be based on following criteria:

Semester-III - PSPHYP301- Project-part-I

Assessment Criteria	Maximum marks
Defining the Problem	05
Literature Survey	05
Plan of the project/ Research design	10
Theoretical methodology	10
Significance and originality of the study/Society application	05
Conclusion	05
Presentation	10
Maximum marks by External examiner	50
Maximum marks by internal examiner/guide	50
Total marks	100

Sem-IV – PSPHYP401 Project-part-II

Assessment Criteria	Maximum marks
Introduction to experimental part of the project	05
Experimental procedure details	05
weekly progress of project work	10
results and discussion	15
Conclusion	05
Presentation	10

Maximum marks by External examiner	50
Maximum marks by internal examiner/guide	50
Total marks	100

MODALITY OF ASSESSMENT

Theory Examination Pattern:

C) Internal Assessment – 40% = 40 marks.

Sr. No	Evaluation type	Marks
1	One Assignment/Case study/Project	10
2	One class Test (multiple choice questions / objective)	20
3	Active participation in routine class instructional deliveries(case studies/ seminars/presentation)	10
	TOTAL	40

B) External examination = 60 %

Semester End Theory Assessment = 60 marks

- i. Duration - These examinations shall be of **2 & 1/2 hours** duration.
- ii. Paper Pattern:
 1. There shall be 5 questions each of 12 marks. On each unit there will be one question and fifth question will be based on all the 4 units.
 2. All questions shall be compulsory with internal choice within the questions.

Questions	Options	Marks	Questions on
Q.1)A)	Any 1 out of 2	8	Unit I
Q.1)B)	Any 1 out of 2	4	
Q.2)A)	Any 1 out of 2	8	Unit II
Q.2)B)	Any 1 out of 2	4	
Q.3)A)	Any 1 out of 2	8	Unit III
Q.3)B)	Any 1 out of 2	4	
Q.4)A)	Any 1 out of 2	8	Unit IV
Q.4)B)	Any 1 out of 2	4	

Q.5)	Any 4 out of 8	12	All four Units
------	----------------	----	----------------

Practical Examination Pattern:

External (Semester end Practical Examination):

Semester – III : Practical Lab Course			
PSPHY301	Project-part-I	Project -External	50
		Project -Internal	50
		Total	100
PSPHY302	Group – A	Experiment	40
		Viva	10
	Group – B	Experiment	40
		Viva	10
		Total	100
		Total marks for practical examination	200

PRACTICAL BOOK/JOURNAL

The students are required to present a duly certified journal for appearing at the practical examination, failing which they will not be allowed to appear for the examination.

In case of loss of Journal and/ or Report, a Lost Certificate should be obtained from Head/ Coordinator / In-charge of the department on the basis of presenting record of lab readings in rough journal; failing which the student will not be allowed to appear for the practical examination.

Overall Examination and Marks Distribution Pattern

Course	RSPHY301			RSPHY302			RSPHY303			RSPHY304			Total
	Int.	Ext.	Total	I	E	T	I	E	T	I	E	T	
Theory	40	60	100	40	60	100	40	60	100	40	60	100	400

Course	RSPHY301	RSPHY302	Total
Practicals	100	100	200

(GRAND TOTAL MARKS: 600)

Course Code: RPSPHY401

Course Title: Experimental Physics

Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand the basics of different probability distributions and central limit theorem.
CO 2	Understand the different types of error and uncertainty in the measurements.
CO3	Get exposure to different types of characterization techniques for material analysis..
CO 4	Understand the basics of vacuum pumps and production of low pressure.
CO 5	Differentiate and study of different types of nuclear detectors and nuclear accelerators.
CO 6	Explore and understand the basics of flow types and number density.
CO7	Demonstrate quantitative problem solving skills in all the topics covered.

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY401	Unit	Experimental Physics	04
Unit I	I	<p>Data Analysis for Physical Sciences: Population and Sample, Data distributions Probability, Probability Distribution, Distribution of Real Data, The normal distribution, The normal distribution, From area under a normal curve to an interval, Distribution of sample means, The central limit theorem, The t-distribution, The log-normal distribution, Assessing the normality of data, Population mean and continuous distributions, Population mean and expectation value, The binomial distribution The Poisson distribution, Experimental Error, Measurement, error and uncertainty, The process of measurement, True value and error, Precision and accuracy, Random and systematic errors, Random errors, Uncertainty in measurement.</p> <p>**Internal tests will be of solving problems using Excel</p>	15 lectures
Unit II	II	<p>Vacuum Techniques: Fundamental processes at low pressures, Mean Free Path, Time to form monolayer, Number density, Materials used at low pressures, vapour pressure Impingement rate, Flow of gases, Laminar and turbulent flow, Production of low pressures; High Vacuum Pumps and systems, Ultra High Vacuum Pumps and System, Measurement of pressure, Leak detections</p>	15 lectures
Unit III	III	<p>Nuclear Detectors: Gamma ray spectrometer using NaI scintillation detector, High Purity Germanium detector, Multi-wire Proportional counter</p> <p>Accelerators: Cockroft Walten Generator, Van de Graf Generator, Sloan and Lawrence type Linear Accelerator, Proton Linear Accelerator, Cyclotron and Synchrotron.</p>	15 lectures
Unit IV	IV	<p>Characterization techniques for materials analysis:</p> <p>Spectroscopy: XRD, XRF, XPS, EDAX, Raman, UV Visible spectroscopy, FTIR spectroscopy.</p> <p>Microscopy: SEM, TEM, AFM</p>	15 lectures

Unit-I References

Course Code: RPSPHY402

Course Title: Atomic and Molecular Physics
Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand the different effects and the Exclusion principle.
CO 2	Formulate an expression for Einstein coefficients, dipole approximations with selection rules.
CO3	Acquire knowledge about the Central field and different coupling approximations.
CO 4	Differentiate between energy levels and orbital theories.
CO 5	Compare and study of different electronic spectra and molecule rotations.
CO 6	Explore and understand the basics of Raman, ESR and NMR Spectrometer. .
CO7	Demonstrate quantitative problem solving skills in all the topics covered.

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY402	Unit	Atomic & Molecular Physics	04
Unit I	I	<p>Review*of one-electron eigen functions and energy levels of bound states, Probability density, Virial theorem.</p> <p>Fine structure of hydrogen atoms, Lamb shift. Hyper fine structure and isotope shift. (ER8-6)</p> <p>Linear and quadratic Stark effect in spherical polar coordinates. Zeeman effect in strong and weak fields, Paschen-Back effect.(BJ,GW)</p> <p>Schrodinger equation for two electron atoms: Identical particles, The Exclusion Principle. Exchange forces and the helium atom (ER), independent particle model, ground and excited states of two electron atoms.(BJ)</p>	15 lectures
Unit II	II	<p>The central field, Thomas-Fermi potential, the gross structure of alkalis (GW). The Hartree theory, ground state of multi-electron atoms and the periodic table (ER), The L-S coupling approximation, allowed terms in L-S coupling, fine structure in L-S coupling, relative intensities in LS coupling, j-j coupling approximation and other types of coupling(GW)</p>	15 lectures
Unit III	III	<p>Interaction of one electron atoms with electromagnetic radiation: Electromagnetic radiation and its interaction with charged particles, absorption and emission transition rates, dipole approximation. Einstein coefficients, selection rules. Line intensities and lifetimes of excited state, line shapes and line widths. X-ray spectra. (BJ)</p>	15 lectures
Unit IV	IV	<p>Born-Oppenheimer approximation - rotational, vibrational and electronic energy levels of diatomic molecules, Linear combination of atomic orbitals (LCAO) and Valence bond (VB) approximations, comparison of valence bond and molecular orbital theories (GA,IL)</p> <p>A) Rotation of molecules: rotational energy levels of rigid and non-rigid diatomic molecules, classification of molecules, linear, spherical, symmetric and asymmetric tops.</p>	15 lectures

	<p>B) Vibration of molecules: vibrational energy levels of diatomic molecules, simple harmonic and anharmonic oscillators, diatomic vibrating rotator and vibrational-rotational spectra.</p> <p>C) Electronic spectra of diatomic molecules: vibrational and rotational structure of electronic spectra. (GA,IL)</p> <p>Quantum theory of Raman effect, Pure rotational Raman spectra, Vibrational Raman spectra, Polarization of light and the Raman effect, Applications</p> <p>General theory of Nuclear Magnetic Resonance (NMR). NMR spectrometer, Principle of Electron spin resonance ESR. ESR spectrometer.(GA,IL)</p> <p>(*Mathematical details can be found in BJ. The students are expected to be acquainted with them but not examined in these.)</p>

Course Title: Advanced Microprocessor and ARM 7

Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand the basic of architecture and of 8086 microprocessor and ARM7.
CO 2	Understand the basic assembly programming of 8086 microprocessor and ARM7.
CO 3	Understand the concepts of serial I/O, data communication and the 8085 Interrupt.
CO 4	Understand the basic concepts of Programmable Peripheral and Interface Devices like 8255 and 8259A with microprocessor 8085.
CO 5	Get exposure to the simulators and software which. mimics the behavior of the microprocessors
CO6	Demonstrate the practical utility of microprocessor through experiments.
CO7	In the laboratory course, student will gain hands-on experience of the working and applications of the microprocessors.

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY403	Unit	<u>Microprocessors and ARM 7</u>	04
Unit I	I	<p>8085 Interrupts: The 8085 Interrupt, 8085 Vectored Interrupts, Restart as Software Instructions, Additional I/O Concepts and Processes.</p> <p>RSG - Ch 12: 12.1, 12.2, 12.3, 12.4</p> <p>Programmable Peripheral and Interface Devices: The 8255A Programmable Peripheral Interface, Interfacing Keyboard and Seven Segment Display, the 8259A Programmable Interrupt Controller, Direct Memory Access(DMA) and 8237 DMA Controller, the 8279 Programmable Keyboard/Display Interface</p> <p>RSG - Ch 15: 15.1, 15.2, 15.5, 15.6 & Ch 14: only 14.3</p> <p>Serial I/O and Data Communication: Basic Concepts in Serial I/O, Software Controlled Asynchronous Serial I/O, The 8085 Serial I/O lines: SOD and SID</p> <p>RSG - Ch 16: 16.1, 16.2, 16.3,</p>	15 lectures
Unit II	II	<p>8086 microprocessor:</p> <p>Register organization of 8086, Architecture, Signal Descriptions of 8086, Physical Memory Organization, General Bus operation, I/O Addressing Capability, Special Processor Activities, Minimum mode 8086 system and timings, Maximum mode of 8086 system and timings.</p> <p>AB - Ch 1: 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 1.8, 1.9.</p> <p>8086 Instruction set and assembler directives:</p> <p>Machine Language Instructions Formats, Addressing modes of 8086, Instruction set of 8086.</p> <p>AB-Ch2:2.1,2.2,2.3.</p> <p>The Art of Assembly Language Programming with 8086:</p>	15 lectures

		<p>A few machine level programs, Machine coding the programs, Programming with an assembler (only using Debug), Assembly language example programs.</p> <p>AB - Ch 3: 3.1, 3.2, 3.3.4 & 3.4</p> <p>Special architectural features and related programming: Introduction to Stack, Stack structure of 8086, Interrupts and Interrupt Service Routines, Interrupt cycle of 8086, Non-maskable interrupt, Maskable interrupt (INTR).</p> <p>AB - Ch 4: 4.1, 4.2, 4.3, 4.4, 4.5, 4.6</p> <p>(Note: Also refer Intel's 8086 Data Sheet)</p>	
Unit III	III	<p>The ARM Architecture: The Acorn RISC Machine, Architectural inheritance, The ARM Programmer's model, ARM development tools.</p> <p>SF - Ch 2: 2.1, 2.2, 2.3, 2.4</p> <p>ARM Organization and Implementation: 3-stage Pipeline ARM organization, ARM instruction execution, ARM implementation.</p> <p>SF - Ch 4: 4.1, 4.3, 4.4</p> <p>ARM Processor Cores: ARM7TDMI SF – Ch 9: 9.1 only</p>	15 lectures
Unit IV	IV	<p>ARM Assembly language Programming: Data processing instructions, Data transfer instructions, Control flow instructions, Writing simple assembly language programs.</p> <p>SF – Ch 3: 3.1, 3.2, 3.3, 3.4</p> <p>The ARM Instruction Set: Introduction, Exceptions, Condition execution, Branch and Branch with Link (B,BL), Branch, Branch with Link and eXchange (BX,BLX), Software Interrupt (SWI), Data processing instructions, Multiply instructions, Count leading zeros (CLZ), Single word and unsigned byte data transfer instructions, Half-word and signed byte data transfer instructions, Multiple register transfer instructions, Swap memory and register instructions</p>	15 lectures

	<p>(SWP), Status register to general register transfer instructions, General register to Status register transfer instructions</p> <p>SF–Ch 5:5.1,5.2,5.3,5.4,5.5,5.6,5.7,5.8,5.9,5.10,5.11,5.12,5.13, 5.14,5.15</p> <p>The Thumb Instruction Set: the Thumb bit in the CPSR, The Thumb programmer's model, Thumb branch instructions, Thumb software interrupt instruction, Thumb data processing instructions, Thumb single register data transfer instructions, Thumb multiple register data transfer instructions, Thumb breakpoint instruction, Thumb implementation, Thumb applications, Example and exercises.</p> <p>SF – Ch 7: 7.1, 7.2, 7.3, 7.4, 7.5, 7.6, 7.7, 7.8, 7.9, 7.10, 7.11</p>

Course Title: VHDL and Communication Interface

Academic year 2020-21

COURSE OUTCOMES:

COURSE OUTCOME	DESCRIPTION
CO 1	Understand the basic Architecture of VHDL
CO 2	Understand the basic of VHDL programming with examples.
CO3	Acquire knowledge on how to simulate and implement combinational and sequential circuits using VHDL systems.
CO 4	Understand the VHDL Interfacing programming.
CO 5	Understand the basics of USB and USB Protocols.
CO 6	Understand the basics of Communication Interface.
CO7	In the laboratory course, student will gain hands-on experience of the working and applications of VHDL.

DETAILED SYLLABUS

Course Code		Title	Credits
RPSPHY404	Unit	VHDL and Communication Interface	04
Unit I	I	<p>VHDL-I:</p> <p>Introduction to VHDL: VHDL Terms, Describing Hardware in VHDL, Entity, Architectures, Concurrent Signal Assignment, Event Scheduling, Statement concurrency, Structural Designs, Sequential Behavior, Process Statements, Process Declarative Region, Process Statement Part, Process Execution, Sequential Statements, Architecture Selection, Configuration Statements, Power of Configurations.</p> <p>DLP -Ch 1</p> <p>Behavioral Modeling: Introduction to Behavioral Modeling, Transport Versus Inertial Delay, Inertial Delay, Transport Delay, Inertial Delay Model, Transport Delay Model, Simulation Deltas, Drivers, Driver Creation, Bad Multiple Driver Model, Generics, Block Statements, Guarded Blocks.</p> <p>DLP -Ch 2</p> <p>Sequential Processing: Process Statement, Sensitivity List, Process Example, Signal Assignment Versus Variable Assignment, Incorrect Mux Example, Correct Mux Example, Sequential Statements, IF Statements, CASE Statements, LOOP statements, NEXT Statement, EXIT Statement, ASSERT Statement, Assertion BNF, WAIT Statements, WAIT ON Signal, WAIT UNTIL Expression, WAIT FOR time_expression, Multiple WAIT Conditions, WAIT Time-Out, Sensitivity List Versus WAIT Statement, Concurrent Assignment Problem, Passive Processes.</p> <p>DLP -Ch 3</p>	15 lectures
Unit II	II	<p>VHDL-II:</p> <p>Data Types: Object Types, Signal, Variables, Constants, Data Types, Scalar Types, Composite Types, Incomplete Types, File Types, File Type Caveats, Subtypes.</p> <p>DLP -Ch 4</p> <p>Subprograms and Packages: Subprograms Function, Conversion Functions, Resolution Functions, Procedures, Packages, Package Declaration, Deferred Constants, Subprogram, Declaration, Package Body.</p>	15 lectures

		<p>DLP -Ch 5 Predefined Attributes: Value Kind Attributes, Value Type Attributes, Value Array Attributes, Value Block Attributes, Function Kind Attributes, Function Type Attributes, Function Array, Attributes, Function Signal Attributes, Attributes 'EVENT and, LAST-VALUE Attribute 'LAST- EVEN Attribute, 'ACTIVE and 'LAST-ACTIVE Signal Kind Attributes, Attribute 'DELAYED, Attribute 'STABLE, Attribute 'QUIET, Attribute TRANSACTION, Type Kind Attributes, Range Kind Attributes.</p> <p>DLP -Ch 6 Configurations: Default Configurations, Component Configurations, Lower-Level Configurations, Entity-Architecture Pair Configuration, Port Maps, Mapping Library Entities, Generics in Configurations, Generic Value Specification in Architecture, Generic Specifications in Configurations, Board-Socket-Chip Analogy, Block Configurations, Architecture configurations.</p> <p>DLP -Ch 7</p>	
Unit III	III	<p>Understanding USB and USB Protocols USB Basics: Uses and limits, Evolution of an interface, Bus components, Division of Labor, Developing a Device. JA – Ch 1 Inside USB Transfers: Transfer Basics, Elements of a Transfer, USB 2.0 Transactions, Ensuring Successful Transfers, Super-Speed Transactions. JA – Ch 2 A Transfer Type for Every Purpose: Control transfers, Bulk Transfers, Interrupt Transfers, Isochronous Transfers, More about time-critical transfers. JA – Ch 3 Enumeration: How the Host learns about devices: The Process, Descriptors. JA – Ch 4 Control Transfers: Structured Requests for Critical Data: Elements of a Control Transfer, Standard Requests, Other Requests.</p>	15 lectures

M.Sc. (Physics) Practical Lab Course
Semester –IV- PSPHYP401-PROJECT
Semester –IV- RPSHYP402-LAB
RPSHYP402-LAB

Important Note

Students have to perform at least 10 experiments from Group A and Group B: with 5 each from group A and B and entered into journal for certification.

Student have to submit project report along with certified journal for semester end practical examination.

Group A:

A I 8085/8086 Microprocessor based experiments:

1. Study of 8085 interrupts (Vector Interrupt7.5).
2. Study of PPI8255 as Handshake I/O (mode1): interfacing switches,LED's.
3. 8086 assembly language programming:
4. Simple data manipulation programs.(8/16-bit addition, subtraction, multiplication, division, 8/16-bit data transfer, finding greatest/smallest number, finding positive/negative numbers, finding odd/even numbers, ascending/descending of numbers, converting BCD nos. into Binary using INT20, displaying a string of characters using INT20)

Please note: Assembly language programming of 8086 may be done by operating PC in real mode by using 'Debug' program. Separate 8086 study kit not needed.

A-II ARM7 based experiments:

1. Simple data manipulation programs (addition, subtraction, multiplication, division etc.)
2. Study of IN and OUT port of ARM7 by Interfacing switches, LEDs etc.
3. Study of Timer.
4. Interfacing DAC/ADC using I2C Protocols.

Group B:

B-I Basic VHDL experiments:

1. Write VHDL programs to realize: logic gates, half adder and full adder
2. Write VHDL programs to realize the following combinational designs:2 to 4 decoder, 8 to 3 encoder without priority, 4 to 1 multiplexer, 1 to 4 de- multiplexer
3. Write VHDL programs to realize the following: SR–Flip Flop, JK–Flip Flop, T – Flip Flop
4. Write a VHDL program to realize a 2/3/4-bit ALU (2-arithmetic,2-logical operations)

B-II VHDL Interfacing based experiments:

1. Interfacing stepper motor: write VHDL code to control direction, speed and number of steps.
2. Interfacing dc motor: write VHDL code to control direction and speed using PWM.
3. Interfacing relays: write VHDL code to control AC bulbs (atleast two) using relays.

4. Manual of VHDL kit.

Note:

Journal should be certified by the laboratory in-charge only if the student performs satisfactorily the minimum number of experiments as stipulated above. Such students, who do not have certified journals, will not be allowed to appear for the practical examinations

Semesters III and IV

Project guidelines and evaluation

Every student will have to complete one long project for both semesters- Semester III and Semester IV with four credits (100 marks) in each semester, in subject –Electronics,/ Solid state electronics,/ solid state Physics,/ Material Science,/ Nanotechnology,/ Nuclear Physics. Student have to submit two separate project reports of one long project for two semesters(III and IV)

In each semester, project will be of 100 marks with 50% by internal evaluation and 50% by external evaluation. In Semester III- student will complete theoretical aspects of the project- consisting of the problem definition, literature survey, current status, objectives, and methodology. **And in semester IV-**student will complete experimental part related to Project –actual experimental work, results and analysis.

In case of electronic projects, use of readymade electronic kits available in the market should be avoided. The electronics project / models should be demonstrated during presentation of the project.

Maximum three students can do a joint project. Each one of them will submit a separate project report with details of the part only he/she has done. However he/she can in brief (in a page one or two) mention in Introduction section what other group members have done.

In case a student takes training in a research institute/training of handling sophisticate equipment, he/she should mention in a report what training he/she has got, which instruments he/she handled and their principle and operation etc.

The project report should be file bound/spiral bound/hard bound and should have following format

Title Page/Cover page
 Certificate endorsed by Project Supervisor and Head of Department
 Declaration
 Abstract of the project
 Table of Contents
 List of Figures
 List of Tables
 Chapters of Content –
 Introduction and Objectives of the project
 Experimental/Theoretical Methodology/Circuit/Model etc. details
 Results and Discussion if any
 Conclusions
 References

**Evaluation of Project by External/Internal examiner will be based on following criteria:
 semester-III – RPSPHY301- Project-part-I**

Assessment Criteria	Maximum marks
Defining the Problem	05
Literature Survey	05
Plan of the project/ Research design	10
Theoretical methodology	10
Significance and originality of the study/Society application	05
Conclusion	05
Presentation	10
Maximum marks by External examiner	50
Maximum marks by internal examiner/guide	50
Total marks	100

Sem-IV - RPSPHYP401-Project-part-II

Assessment Criteria	Maximum marks
Introduction to experimental part of the project	05
Experimental procedure details	05
weekly progress of project work	10
results and discussion	15
Conclusion	05
Presentation	10
Maximum marks by External examiner	50
Maximum marks by internal examiner/guide	50
Total marks	100

MODALITY OF ASSESSMENT

Theory Examination Pattern:

A) Internal Assessment - 40% = 40 marks.

Sr. No	Evaluation type	Marks
1	One Assignment/Case study/Project	10
2	One class Test (multiple choice questions / objective)	20
3	Active participation in routine class instructional deliveries(case studies/ seminars/presentation)	10
	TOTAL	40

B) External examination - 60 %

Semester End Theory Assessment - 60 marks

iii. Duration - These examinations shall be of **2 & 1/2 hours** duration.

iv. Paper Pattern:

- There shall be 5 questions each of 12 marks. On each unit there will be one question and fifth question will be based on all the 4 units.
- All questions shall be compulsory with internal choice within the questions.

Questions	Options	Marks	Questions on
Q.1)A)	Any 1 out of 2	8	Unit I
Q.1)B)	Any 1 out of 2	4	
Q.2)A)	Any 1 out of 2	8	Unit II
Q.2)B)	Any 1 out of 2	4	
Q.3)A)	Any 1 out of 2	8	Unit III
Q.3)B)	Any 1 out of 2	4	
Q.4)A)	Any 1 out of 2	8	Unit IV
Q.4)B)	Any 1 out of 2	4	
Q.5)	Any 4 out of 8	12	All four Units

Practical Examination Pattern:**External (Semester end Practical Examination):**

Semester – III : Practical Lab Course			
RSPHY401	Project-part-I	Project -External	50
		Project -Internal	50
		Total	100
RSPHY402	Group – A	Experiment	40
		Viva	10
	Group – B	Experiment	40
		Viva	10
		Total	100
		Total marks for practical examination	200

PRACTICAL BOOK/JOURNAL

The students are required to present a duly certified journal for appearing at the practical examination, failing which they will not be allowed to appear for the examination.

In case of loss of Journal and/ or Report, a Lost Certificate should be obtained from Head/ Coordinator / In-charge of the department on the basis of presenting record of lab readings in rough journal; failing which the student will not be allowed to appear for the practical examination.

Overall Examination and Marks Distribution Pattern

Course	RSPHY401			RSPHY402			RSPHY403			RSPHY404			Total
	(Marks)			(Marks)			(Marks)			(Marks)			
	Int.	Ext.	Total	I	E	T	I	E	T	I	E	T	
Theory	40	60	100	40	60	100	40	60	100	40	60	100	400

Course	RSPHY401	RSPHY402	Total
	(Marks)	(Marks)	(Marks)
Practicals	100	100	200

(GRAND TOTAL MARKS:600)
