

Course Objective

It is obvious that the objective of a graduate course will be general and those of course leading to a Master's degree will be specific. The course that is designed for the Master's degree is more focused. The students seeking admission to the Masters' course is equipped with a basic degree in the subject and is expected to have garnered the basic knowledge about the subject.

Designing a course for the Master's degree one has to think about what the student seeks with the degree and what are the doors that will open for the student with degree acquired. The focus of the objective is introducing the students to the advanced level of the subject and making him or her aware of the cutting edge of knowledge in the subject, may be in the form of new advances in the field or a new chapter opened, representing the frontiers of the research, that is been carried out.

The three-fold objective of the course is to advance the knowledge that can be put to practical use. It can be inspiring the students for the research fields. This is absolutely necessary because the advances in any branch of science comes through the research frontiers of that subject. The third objective is to train the student to take major decisions as and when required regarding the day –to-day working in the field of the subject. This is necessary because the candidate in his or her career would occupy such positions in the hierarchy where such situations are inevitable. This will require not only the advanced knowledge of the subject but will also require the perspective to look at the problem in totality making use of all the available resources on hand.

Outcome of the course –

Student with a masters degree in the specific branch of chemistry should be well versed with the following:

1. The knowledge of the advance concepts in the branch of specialisation.
2. Application of the knowledge acquired to the practical problems may be in the field of research or analysis.
3. The student should be able to get not only bird's eye view of the subject but even the intricate details that may pertain to a particular specialised field on the branch.
In conclusion, the students with the masters degree should be a master of all the parts of the branch.

Ramnarain Ruia Autonomous College**

Syllabus for Semester I and II

Program: M.Sc.

Course Code: (RPSCHE)

(Credit Based Semester and Grading System with effect from
the academic year 2019-20)

SEMESTER I				
Course Code	UNIT	TOPICS	CREDITS	LECTURES
RPSCHE 101	I	Thermodynamics-I	4	15
	II	Quantum Chemistry		15
	III	Chemical Dynamics-I		15
	IV	Electrochemistry		15
RPSCHE 102	I	Chemical Bonding	4	15
	II	Molecular Symmetry and Group Theory		15
	III	Materials Chemistry and Nanomaterials		15
	IV	Characterisation of Coordination compounds		15
RPSCHE 103	I	Physical Organic Chemistry	4	15
	II	Nucleophilic substitution reactions and Aromaticity		15
	III	Stereochemistry		15
	IV	Oxidation and Reduction		15
RPSCHE 104	I	Language of Analytical Chemistry	4	15
	II	Calculations based on Chemical Principles		15
	III	Optical Methods		15
	IV	Thermal Methods		15
RPSCHEP 101		PRACTICALS	8	60
RPSCHEP 102				
RPSCHEP 103				
RPSCHEP 104				

SEMESTER II				
Course Code	UNIT	TOPICS	CREDITS	LECTURES
RPSCHE 201	I	Chemical Thermodynamics II	4	15
	II	Quantum Chemistry II		15
	III	Chemical Kinetics and Molecular Reaction Dynamics		15
	IV	Solid State Chemistry and Phase Equilibria		15
RPSCHE 202	I	Inorganic Reaction Mechanism:	4	15
	II	Organometallic Chemistry of Transition metals:		15
	III	Environmental Chemistry:		15
	IV	Bioinorganic Chemistry:		15
RPSCHE 203	I	Alkylation of Nucleophilic Carbon Intermediates	4	15
	II	Reactions and Rearrangements		15
	III	Introduction to Molecular Orbital Theory for Organic Chemistry		15
	IV	NMR spectroscopy and Mass spectrometry		15
RPSCHE 204	I	Chromatography	4	15
	II	X-ray spectroscopy		15
	III	Surface Analytical Techniques		15
	IV	Electroanalytical Methods		15
RPSCHEP 201	PRACTICALS		8	60
RPSCHEP 202				
RPSCHEP 203				
RPSCHEP 204				

Detail Syllabus

Semester – I

Paper I

Course Code: RPSCHE 101

Credits: 4

Physical Chemistry-I

Unit I	Thermodynamics-I	(15 L)
	<p>1.1. State function and exact differentials. Maxwell equations, Maxwell thermodynamic Relations; it's significance and applications to ideal gases, Joule Thomson experiment, Joule Thomson coefficient, inversion temperature, Joule Thomson coefficient in terms of van der Waals constants.</p> <p>1.2. Third law of Thermodynamics, Entropy change for a phase transition, absolute entropies, determination of absolute entropies in terms of heat capacity, standard molar entropies and their dependence on molecular mass and molecular structure, residual entropy. (Ref 2 and 1,10,11,12 17)</p>	<p>(8L)</p> <p>(7L)</p>
Unit II	Quantum Chemistry	(15L)
	<p>2.1. Classical Mechanics, failure of classical mechanics: Need for Quantum Mechanics.</p> <p>2.2. Particle waves and Schrödinger wave equation, wave functions, properties of wave functions, Normalization of wave functions, orthogonality of wave functions.</p> <p>2.3. Operators and their algebra, linear and Hermitian operators, operators for the dynamic variables of a system such as, position, linear momentum, angular momentum, total energy, eigen functions, eigen values and eigen value equation, Schrödinger wave equation as the eigen value equation of the Hamiltonian operator, average value and the expectation value of a dynamic variable of the system, Postulates of Quantum Mechanics, Schrodinger's Time independent wave equation from Schrodinger's time dependent wave equation.</p> <p>2.4. Application of quantum mechanics to the following systems:</p> <p>a) Free particle, wave function and energy of a free particle.</p> <p>b) Particle in a one, two and three dimensional box, separation of variables, Expression for the wave function of the system, expression for the energy of the system, concept of quantization, introduction of quantum number, degeneracy of the energy levels.</p> <p>c) Harmonic oscillator, approximate solution of the equation, Hermite polynomials, expression for wave function, expression for energy, use of the recursion formula. (Ref 7, 8 and 9)</p>	

Unit III	Chemical Dynamics-I	(15L)
	<p>3.1 Composite Reactions: Recapitulation: Rate laws, Differential rate equations Consecutive reactions, Steady state Approximation, rate determining steps, Microscopic Reversibility and Detailed Balanced Chain reactions-chain initiation processes. Some inorganic mechanisms: formation and decomposition of phosgene, decomposition of ozone, Reaction between Hydrogen and Bromine and some general examples Organic Decompositions: Decomposition of ethane, decomposition of acetaldehyde Gas phase combustion: Reaction between hydrogen and oxygen, Semenov – Hinshelwood and Thompson mechanism, Explosion limits and factors affecting explosion limits.</p> <p>3.2 Polymerization reactions: Kinetics of stepwise polymerization, Calculation of degree of polymerization for stepwise reaction. Kinetics of free radical chain polymerization, Kinetic chain length and estimation of average no .of monomer units in the polymer produced by chain polymerization.</p> <p>3.3 Reaction in Gas Phase: Unimolecular Reactions: Lindeman-Hinshelwood theory, Rice-Ramsperger-Kassel (RRK) theory, Rice-Ramsperger-Kassel Marcus (RRKM) theory.</p> <p>(Ref. 2 and 15, 17, 18)</p>	
Unit IV	Electrochemistry	(15L)
	<p>Recapitulation – basics of electrochemistry.</p> <p>4.1. Debye-Hückel theory of activity coefficient, Debye-Hückel limiting law and it's extension to higher concentration (derivations are expected).</p> <p>4.2. Electrolytic conductance and ionic interaction, relaxation effect,. Debye-Hückel- Onsager equation (derivation expected). Validity of this equation for aqueous and non- aqueous solution, deviations from Onsager equation, Debye -Falkenhagen effect (dispersion of conductance at high frequencies), Wien effect.</p> <p>4.3. Batteries: Alkaline fuel cells, Phosphoric acid fuel cells, High temperature fuel cells (Solid –Oxide Fuel Cells (SOFC) and Molten Carbonate Fuel Cells)</p> <p>4.4. Bio-electrochemistry: Introduction, cells and membranes, membrane potentials, theory of membrane potentials, interfacial electron transfer in biological systems, adsorption of proteins onto metals from solution, electron transfer from modified metals to dissolved protein in solution, enzymes as electrodes, electrochemical enzyme-catalysed oxidation of styrene. Goldman equation. (derivations are expected)</p> <p>(Ref: 14 and 16, 17, 18) (Note: Numerical and theoretical problems from each unit are expected)</p>

Physical Chemistry Practical-I

Paper I

Course Code: RPSCHEP 101

Credits: 8

Non – Instrumental:

1. To determine the heat of solution (ΔH) of a sparingly soluble acid (benzoic /salicylic acid) from solubility measurement at three different temperature.
2. To study the variation of calcium sulphate with ionic strength and hence determine the thermodynamic solubility product of CaSO_4 at room temperature.
3. To investigate the reaction between acetone and iodine.
4. To study the variation in the solubility of Ca(OH)_2 in presence of NaOH and hence to determine the solubility product of Ca(OH)_2 at room temperature.
5. Graph Plotting of mathematical functions –linear, exponential and trigonometry and identify whether functions are acceptable or non-acceptable?

Instrumental:

1. To determine the mean ionic activity coefficient of an electrolyte by e.m.f. measurement.
2. To study the effect of substituent on the dissociation constant of acetic acid conductometrically.
3. To determine pK_a values of phosphoric acid by potentiometric titration with sodium hydroxide using glass electrode.
4. To verify Ostwald's dilution law and to determine the dissociation constant of a weak mono-basic acid conductometrically.

Semester: I
Paper II
Course Code: RPSCHE102
Credits: 4
Inorganic Chemistry-I

Unit I	Chemical Bonding	(15 L)
	<p>1.1 Recapitulation of hybridization Derivation of wave functions for sp, sp^2, sp^3 orbital hybridization types considering only sigma bonding.</p> <p>1.2 Discussion of involvement of d orbitals in various types of hybridizations. Concept of resonance, resonance energy derivation expected. Formal charge with examples.</p> <p>1.3 Critical analysis of VBT.</p> <p>1.4 Molecular Orbital Theory for diatomic species of First transition Series.</p> <p>1.5 Molecular Orbital Theory for Polyatomic species considering σ bonding for SF_6, CO_2, B_2H_6, I_3^- molecular species.</p> <p>1.6 Weak forces of attraction: Hydrogen bonding – concept, types, properties, methods of detection and importance. Van der Waal's forces, ion-dipole, dipole-dipole, London forces.</p>	
Unit II	Molecular Symmetry and Group Theory	(15L)
	<p>2.1 Symmetry criterion of optical activity, symmetry restrictions on dipole moment. A systematic procedure for symmetry classification of molecules.</p> <p>2.2 Concepts of Groups, Sub-groups, Classes of Symmetry operations, Group Multiplication Tables. Abelian and non-Abelian point groups.</p> <p>2.3 Representation of Groups: Matrix representation of symmetry operations, reducible and irreducible representations. The Great Orthogonality Theorem and its application in construction of character tables for point groups C_{2v}, C_{3v} and D_{2h}, structure of character tables.</p> <p>2.4 Applications of Group Theory:</p> <p>2.4.1 Symmetry adapted linear combinations (SALC), symmetry aspects of MO theory, sigma bonding in AB_n (Ammonia, CH_4) molecule.</p> <p>2.4.2 Determination of symmetry species for translations and rotations.</p> <p>2.4.3 Mulliken's notations for irreducible representations.</p> <p>2.4.4 Reduction of reducible representations using reduction formula.</p> <p>2.4.5 Group-subgroup relationships.</p> <p>2.4.6 Descent and ascent in symmetry correlation diagrams showing relationship between different groups.</p>	

Unit III	Materials Chemistry and Nanomaterials	(15L)
	<p>3.1 Solid State Chemistry</p> <p>3.1.1 Electronic structure of solids and band theory, Fermi level, K Space and Brillouin Zones.</p> <p>3.1.2 Structures of Compounds of the type: AB (nickel arsenide (NiAs)), AB₂ (fluorite (CaF₂) and anti-fluorite structures, rutile (TiO₂) structure and layer structure (cadmium chloride and iodide (CdCl₂, CdI₂)).</p> <p>3.1.3 Methods of preparation for inorganic solids: Ceramic method, precursor method, sol-gel method (applications in Biosensors), microwave synthesis (discussion on principles, examples, merits and demerits are expected)</p> <p>3.2 Nanomaterials</p> <p>3.2.1 Preparative methods: Chemical methods, Solvothermal, Combustion synthesis, Microwave, Co-precipitation, Langmuir Blodgett (L-B) method, Biological methods: Synthesis using microorganisms.</p> <p>3.2.2 Applications in the field of semiconductors, solar cells</p>	
Unit IV	Characterisation of Coordination compounds	(15L)
	<p>4.1. Formation, thermal studies, Conductivity measurements, electronic spectral and magnetic measurements, IR, NMR and ESR spectroscopic methods.</p> <p>4.2. Spectral calculations using Orgel and Tanabe-Sugano diagram, calculation of electronic parameters such as Δ, B, C, Nephelauxetic ratio.</p> <p>4.3. Determination of formation constants of metal complexes (Overall and Stepwise): Comparative studies of Potentiometric and spectral methods.</p>

Inorganic Chemistry Practical-I

Paper II

Course Code: RPSCHEP 102

Inorganic Preparations (Synthesis and Characterization):

1. Hexammine nickel (II) sulphate
2. Tris-thiourea copper(I) sulphate
3. Bis (ethylenediammine) Copper (II) Sulphate
4. Tetrammine monocarbonato Cobalt (III) Nitrate

Instrumentation:

1. Determination of equilibrium constant by Slope intercept method for $\text{Fe}^{+3}/\text{SCN}^-$ system
2. Determination of Electrolytic nature of inorganic compounds by Conductance measurement.
3. Determination of Copper (II) using EDTA spectrophotometrically
4. Determination of titanium (IV) colorimetrically.

By: Dr Deepak Pant

Semester: I
Paper III
Course Code: RPSCHE 103
Credits: 4
Organic Chemistry-I

Unit I	Physical Organic Chemistry	(15)
	<p>1.1 Thermodynamic and kinetic requirements of a reaction: rate and equilibrium constants, reaction coordinate diagram, transition state (activated complex), nature of activated complex, Hammond postulate, Reactivity <i>vs</i> selectivity, Curtin-Hammett Principle, Microscopic reversibility, Kinetic <i>vs</i> thermodynamic control of organic reactions.</p> <p>1.2 Determining mechanism of a reaction: Product analysis, kinetic studies, use of isotopes (Kinetic isotope effect – primary and secondary kinetic isotope effect). Detection and trapping of intermediates, crossover experiments and stereochemical evidence.</p> <p>1.3 Acids and Bases: Factors affecting acidity and basicity: Electronegativity and inductive effect, resonance, bond strength, electrostatic effects, hybridization, aromaticity and solvation. Comparative study of acidity and basicity of organic compounds on the basis of pKa values, Leveling effect and non-aqueous solvents. Acid and base catalysis – general and specific catalysis with examples.</p>	
Unit II	Nucleophilic substitution reactions and Aromaticity	(15L)
	<p>2.1. Nucleophilic substitution reactions:</p> <p>2.1.1. Aliphatic nucleophilic substitution: S_N1, S_N2, S_Nⁱ reactions, mixed S_N1 and S_N2 and SET mechanisms. S_N reactions involving NGP - participation by aryl rings, α-and pi-bonds. Factors affecting these reactions: substrate, nucleophilicity, solvent, steric effect, hard-soft interaction, leaving group. Ambident nucleophiles. S_NCA, S_N1' and S_N2' reactions. S_N at sp² (vinylic) carbon.</p> <p>2.1.2. Aromatic nucleophilic substitution: S_NAr, S_N1, benzyne mechanisms. Ipso, cine, tele and vicarious substitution.</p> <p>2.1.3. Ester hydrolysis: Classification, nomenclature and study of all eight mechanisms of acid and base catalyzed hydrolysis with suitable examples.</p> <p>2.2. Aromaticity:</p> <p>2.2.1. Structural, thermochemical, and magnetic criteria for aromaticity, including NMR characteristics of aromatic systems. Delocalization and aromaticity.</p>	<p>(9 L)</p> <p>(6 L)</p>

	<p>2.2.2. Application of HMO theory to monocyclic conjugated systems. Frost-Musulin diagrams. Huckel's (4n+2) and 4n rules.</p> <p>2.2.3. Aromatic and antiaromatic compounds up-to 18 carbon atoms. Homoaromatic compounds. Aromaticity of all benzenoid systems, heterocycles, metallocenes, azulenes, annulenes, aromatic ions and Fullerene (C₆₀).</p>	
Unit III	Stereochemistry:	(15L)
	<p>3.1. Concept of Chirality: Recognition of symmetry elements.</p> <p>3.2. Molecules with tri- and tetra-coordinate centers: Compounds with carbon, silicon, nitrogen, phosphorous and sulphur chiral centers, relative configurational stabilities.</p> <p>3.3. Molecules with two or more chiral centers: Constitutionally unsymmetrical molecules: erythro-threo and syn-anti systems of nomenclature. Interconversion of Fischer, Sawhorse, Newman and Flying wedge projections. Constitutionally symmetrical molecules with odd and even number of chiral centers: enantiomeric and meso forms, concept of stereogenic, chirotopic, and pseudoasymmetric centres. R-S nomenclature for chiral centres in acyclic and cyclic compounds.</p> <p>3.4. Axial and planar chirality: Principles of axial and planar chirality. Stereochemical features and configurational descriptors (R,S) for the following classes of compounds: allenes, alkylidene cycloalkanes, spirans, biaryls (buttressing effect) (including BINOLs and BINAPs), ansa compounds, cyclophanes, trans-cyclooctenes.</p> <p>3.5. Prochirality: Chiral and prochiral centres; prochiral axis and prochiral plane. Homotopic, heterotopic (enantiotopic and diastereotopic) ligands and faces. Identification using substitution and symmetry criteria. Nomenclature of stereoheterotopic ligands and faces. Symbols for stereoheterotopic ligands in molecules with i) one or more prochiral centres ii) a chiral as well as a prochiral centre, iii) a prochiral axis iv) a prochiral plane v) pro-pseudoasymmetric centre. Symbols for enantiotopic and diastereotopic faces.</p>	
Unit IV	Oxidation and Reduction:	(15L)
	<p>4.1. Oxidation: General mechanism, selectivity, and important applications of the following:</p> <p>4.1.1. Dehydrogenation: Dehydrogenation of C-C bonds including aromatization of six membered rings using metal (Pt, Pd, Ni) and organic reagents (chloranil, DDQ).</p> <p>4.1.2. Oxidation of alcohols to aldehydes and ketones: Chromium reagents such as K₂Cr₂O₇/H₂SO₄ (Jones reagent), CrO₃-pyridine (Collin's reagent), PCC (Corey's reagent) and PDC (Cornforth reagent), hypervalent iodine reagents (IBX, Dess-Martin</p>	

	<p>periodinane). DMSO based reagents (Swern oxidation), Corey-Kim oxidation - advantages over Swern and limitations; and Pfitzner-Moffatt oxidation-DCC and DMSO and Oppenauer oxidation.</p> <p>4.1.3. Oxidation involving C-C bonds cleavage: Glycols using HIO_4; cycloalkanones using CrO_3; carbon-carbon double bond using ozone, KMnO_4, CrO_3, NaIO_4 and OsO_4; aromatic rings using RuO_4 and NaIO_4.</p> <p>4.1.4. Oxidation involving replacement of hydrogen by oxygen: oxidation of CH_2 to CO by SeO_2, oxidation of arylmethanes by CrO_2Cl_2 (Etard oxidation).</p> <p>4.1.5. Oxidation of aldehydes and ketones: with H_2O_2 (Dakin reaction), with peroxy acid (Baeyer-Villiger oxidation)</p> <p>4.2. Reduction: General mechanism, selectivity, and important applications of the following reducing reagents:</p> <p>4.2.1. Reduction of CO to CH_2 in aldehydes and ketones- Clemmensen reduction, Wolff-Kishner reduction and Huang-Minlon modification.</p> <p>4.2.2. Metal hydride reduction: Boron reagents (NaBH_4, NaCNBH_3, diborane, 9-BBN, $\text{Na}(\text{OAc})_3\text{BH}$, aluminium reagents ($\text{LiAlH}_4$, DIBAL-H, Red Al, L and K- selectrides).</p> <p>4.2.3. NH_2NH_2 (diimide reduction) and other non-metal based agents including organic reducing agents (Hantzsch dihydropyridine).</p> <p>4.2.4. Dissolving metal reductions: using Zn, Li, Na, and Mg under neutral and acidic conditions, Li/Na-liquid NH_3 mediated reduction (Birch reduction) of aromatic compounds and acetylenes.</p>

Organic Chemistry Practical-I
Paper III
Course Code: RPSCHEP 103

One step preparations (1.0 g scale)

1. Bromobenzene to p-nitrobromobenzene
2. Anthracene to anthraquinone
3. Benzoin to benzil
4. Anthracene to Anthracene maleic anhydride adduct
5. 2-Naphthol to BINOL
6. p-Benzoquinone to 1,2,4-triacetoxybenzene
7. Ethyl acetoacetate to 3-methyl-1-phenylpyrazol-5-one
8. *o*-Phenylenediamine to 2-methylbenzimidazole
9. *o*-Phenylenediamine to 2,3-diphenylquinoxaline
10. Urea and benzil to 5,5-diphenylhydantoin

Semester: I
Course Code: RPSCHE 104
Credits: 4
Paper IV: Analytical Chemistry-1

Unit I		(15 L)
	1.1 Language of Analytical Chemistry	(8 L)
	<p>1.1.1 Analytical perspective, Common analytical problems, terms involved in analytical chemistry (analysis, determination, measurement, techniques, methods, procedures and protocol)</p> <p>1.1.2 An overview of analytical methods, types of instrumental methods, instruments for analysis, data domains, electrical and non-electrical domains, detectors, transducers and sensors, selection of an analytical method, accuracy, precision, selectivity, sensitivity, detection limit and dynamic range.</p> <p>1.1.3 Errors, determinate and indeterminate errors. Types of determinate errors, tackling of errors. 1.1.4 Quantitative methods of analysis: calibration curve, standard addition and internal standard method.</p>	
	1.2 Quality in Analytical Chemistry:	(7 L)
	<p>1.2.1 Quality Management System (QMS):</p> <p>Evolution and significance of Quality Management, types of quality standards for laboratories, total quality management (TQM), philosophy implementation of TQM (reference of Kaizen, Six Sigma approach & 5S), quality audits and quality reviews, responsibility of laboratory staff for quality and problems.</p>	
	<p>1.2.2 Safety in Laboratories:</p> <p>Basic concepts of Safety in Laboratories, Personal Protection Equipment (PPE), OSHA, Toxic Hazard (TH) classifications, Hazardous Chemical Processes (including process calorimetry / thermal build up concepts).</p>	
	<p>1.2.3 Accreditations:</p> <p>Accreditation of Laboratories, Introduction to ISO series, Indian Government Standards (ISI, Hallmark, Agmark)</p>	
	<p>1.2.4 Good Laboratory Practices (GLP)</p> <p>Principle, Objective, OECD guidelines, The US FDA 21CFR58, Klimisch score</p>	
Unit II	Calculations based on Chemical Principles	(15)

	<p>2.1 Concentration of a solution based on volume and mass units.</p> <p>2.1.1 Calculations of ppm, ppb and dilution of the solutions, concept of mmol.</p> <p>2.2 Stoichiometry of chemical reactions, concept of kg mol, limiting reactant, theoretical and practical yield.</p> <p>2.3 Solubility and solubility equilibria, effect of presence of common ion.</p> <p>2.3.1 Calculations of pH of acids, bases, acidic and basic buffers.</p> <p>2.3.2 Concept of formation constants, stability and instability constants, stepwise formation constants.</p> <p>2.4 Oxidation number, rules for assigning oxidation number, redox reaction in term of oxidation number, oxidizing and reducing agents, equivalent weight of oxidizing and reducing agents, stoichiometry of redox titration (Normality of a solution of a oxidizing / reducing agent and its relationship with molarity).</p>	
Unit III	Optical Methods	(15 L)
	<p>3.1 Recapitulation and FT Technique</p> <p>3.1.1 Recapitulation of basic concepts, Electromagnetic spectrum, Sources, Detectors, sample containers.</p> <p>3.1.2 Laser as a source of radiation, Fibre optics</p> <p>3.1.3 Introduction of Fourier Transform</p> <p>3.2 Molecular Ultraviolet and Visible Spectroscopy</p> <p>NUMERICALS ARE EXPECTED</p> <p>3.2.1 Derivation of Beer- Lambert's Law and its limitations, factors affecting molecular absorption, types of transitions (emphasis on charge transfer absorption), pH, temperature, solvent and effect of substituents.</p> <p>Applications of Ultraviolet and Visible spectroscopy:</p> <ol style="list-style-type: none"> 1) On charge transfer absorption 2) Simultaneous spectroscopy 3) Derivative Spectroscopy <p>3.2.2 Dual spectrometry – Introduction, Principle, Instrumentation and Applications</p> <p>3.3 Infrared Absorption Spectroscopy</p> <p>3.3.1 Instrumentation: Sources, Sample handling, Transducers, Dispersive, non-dispersive instrument</p>	<p>(3 L)</p> <p>(6 L)</p> <p>(6 L)</p>

	<p>3.3.2 FTIR and its advantages</p> <p>3.3.3 Applications of IR (Mid IR, Near IR, Far IR): Qualitative with emphasis on “Finger print” region, Quantitative analysis, Advantages and Limitations of IR</p> <p>3.3.4 Introduction and basic principles of diffuse reflectance spectroscopy.</p>	
Unit-IV		(15 L)
	<p>4.1 Thermal Methods:</p> <p>4.1.1 Introduction, Recapitulation of types of thermal methods, comparison between TGA and DTA.</p> <p>4.1.2 Differential Scanning Calorimetry- Principle, comparison of DTA and DSC, Instrumentation, Block diagram, Nature of DSC Curve, Factors affecting curves (sample size, sample shape, pressure).</p> <p>4.1.3 Applications - Heat of reaction, Specific heat, Safety screening, Polymers, liquid crystals, Percentage crystallinity, oxidative stability, Drug analysis, Magnetic transition. e.g. Analysis of Polyethylene for its crystallinity.</p> <p>4.2 Automation in chemical analysis:</p> <p>Need for automation, Objectives of automation, An overview of automated instruments and instrumentation, process control analysis, flow injection analysis, discrete automated systems, automatic analysis based on multilayered films, gas monitoring equipments, Automatic titrators.</p>	<p>(9 L)</p> <p>(6 L)</p>

6. Analytical Chemistry by Open Learning: Thermal Methods by James W. Dodd & Kenneth H. Tonge
7. Instrumental methods of analysis, 7 th Edition, Willard, Merrit, Dean: Chapter 26
8. Instrumental Analysis, 5th Edition, Skoog, Holler and Nieman: Chapter 33
9. Introduction to instrumental methods of analysis by Robert D. Braun, Mc. GrawHill (1987): Chapter 28

Analytical Chemistry Practical-I

Paper IV

Course Code: RPSCHP 104

1. To carry out assay of the sodium chloride injection by Volhard's method.
Statistical method.
2. To determine (a) the ion exchange capacity (b) exchange efficiency of the given cation exchange resin.
3. To determine amount of Cr(III) and Fe(II) individually in a mixture of the two by titration with EDTA.
4. To determine the breakthrough capacity of a cation exchange resin.
5. To determine the lead and tin content of a solder alloy by titration with EDTA.
6. To determine amount of Cu(II) present in the given solution containing a mixture of Cu(II) and Fe(II).
7. To determine number of nitro groups in the given compound using TiCl_3 .

Semester – II
Paper I
Course Code: RPSCHE 201
Credits: 4
Physical Chemistry-II

Unit I	Chemical Thermodynamics II	(15 L)
	<p>1.1. Fugacity of real gases, Determination of fugacity of real gases using graphical method and from equation of state. Equilibrium constant for real gases in terms of fugacity. Gibbs energy of mixing, entropy and enthalpy of mixing.</p> <p>1.2. Real solutions: Chemical potential in non ideal solutions excess functions of non ideal solutions calculation of partial molar volume and partial molar enthalpy, Gibbs Duhem Margules equation.</p> <p>1.3. Thermodynamics of surfaces, Pressure difference across curved surface (Laplace equation), vapour pressure of droplets (Kelvin equation), Gibbs adsorption isotherm, BET isotherm (derivations expected).</p> <p>1.4. Bioenergetics : standard free energy change in biochemical reactions, exergonic, endergonic. Hydrolysis of ATP, synthesis of ATP from ADP.</p>	
Unit II	Quantum Chemistry II	(15 L)
	<p>2.1. Rigid rotor, spherical coordinates Schrödinger wave equation in spherical coordinates, separation of the variables, the phi equation, wavefunction, quantum number, the theta equation, wave function, quantization of rotational energy, spherical harmonics.</p> <p>2.2. Hydrogen atom, the two particle problem, separation of the energy as translational and potential, separation of variables, the R the θ * and the ϕ equations, solution of the reequation, introduction of the four quantum numbers and their interdependence on the basis of the solutions of the three equations, total wave function, expression for the energy, probability density function, distances and energies in atomic units, radial and angular plots., points of maximum probability, expressions for the total wave function for 1s,2s, 2p and 3d orbitals of hydrogen.</p> <p>2.3. Application of the Schrödinger equation to two electron system, limitations of the equation, need for the approximate solutions, methods of obtaining the approximate solution of the Schrödinger wave equation. Hückel Molecular Orbitals theory for ethylene , 1,3-butadiene and benzene. <i>(Derivation expected)</i></p>	
Unit III	Chemical Kinetics and Molecular Reaction Dynamics	(15 L)
	<p>3.1. Elementary Reactions in Solution:- Solvent Effects on reaction rates, Reactions between ions- influence of solvent Dielectric constant, influence of ionic strength, Linear free energy relationships Enzyme action</p> <p>3.2. Kinetics of reactions catalyzed by enzymes -Michaelis-Menten analysis, Lineweaver-Burk and Eadie Analyses.</p> <p>3.3. Inhibition of Enzyme action: Competitive, Noncompetitive and Uncompetitive Inhibition. Effect of pH, Enzyme activation by metal ions,</p>	

	<p>Regulatory enzymes.</p> <p>3.4. Kinetics of reactions in the Solid State:- Factors affecting reactions in solids Rate laws for reactions in solid: The parabolic rate law, The first order rate Law, the contracting sphere rate law, Contracting area rate law, some examples of kinetic studies. (Ref: 7 and 2)</p>	
Unit IV	Solid State Chemistry and Phase Equilibria	(15L)
	<p>4.1 : Solid State Chemistry</p> <p>4.1.1. Recapitulation: Structures and Defects in solids.</p> <p>Types of Defects and Stoichiometry</p> <p>a) Zero dimensional (point) Defects b) One dimensional (line) Defects c) Two dimensional (Planar) Defects d) Thermodynamics of formation of defects (Mathematical derivation to find concentration of defects and numerical problems based on it) (Ref: 17, 18 and 19)</p> <p>4.2 Phase equilibria</p> <p>4.2.1. Recapitulation: Introduction and definition of terms involved in phase rule. Thermodynamic derivation of Gibbs Phase rule.</p> <p>4.2.2. Two component system:</p> <p>a) Solid –Gas System : Hydrate formation, Amino compound formation b) Solid – Liquid System: Formation of a compound with congruent melting point, Formation of a compound with incongruent melting point . (with suitable examples)</p> <p>4.2.3. Three component system Type-I : Formation of one pair of partially miscible liquids Type-II: Formation of two pairs of partially miscible liquids Type-III: Formation of three pairs of partially miscible liquids (Ref: 4, 6, 11, 12 ,13,16, 24)</p>

Semester: II
Physical Chemistry Practical-II

Paper I

Course Code: RPSCHEP 201

Credits: 8

Non – instrumental:

1. Polar plots of atomic orbitals such as $1s$, $2p_z$ and $3d_{z^2}$ orbitals by using angular part of hydrogen atom wave functions.
2. To study the influence of ionic strength on the base catalysed hydrolysis of ethyl acetate.
3. To study phase diagram of three component system water – chloroform /toluene - acetic acid.
4. To determine the rate constant of decomposition reaction of diacetone alcohol by dilatometric method.

Instrumental:

1. To determine the formula of silver ammonia complex by potentiometric method.
2. To determine CMC of sodium Lauryl Sulphate from measurement of conductivities at different concentrations.
3. To determine Hammett constant of *m*- and *p*- amino benzoic acid/nitro benzoic acid by pH measurement.
4. To determine the Michaelis – Menten's constant value (K_m) of the enzyme Beta Amylase spectrophotometrically.

Semester: II
Course Code: RPSCHE 202
Credits: 4
Paper II: Inorganic Chemistry

Unit I	Inorganic Reaction Mechanism	(15 L)
	<p>1.1 Rate of reactions, factors affecting the rate of reactions, techniques for determination of rate of reaction (Direct chemical analysis, spectrophotometric method, electrochemical and flow methods).</p> <p>1.2 Ligand substitution reactions of:</p> <p>a) Octahedral complexes without breaking of metal-ligand bond (Use of isotopic labelling method)</p> <p>b) Square planar complexes, trans-effect, its theories and applications. Mechanism and factors affecting these substitution reactions.</p> <p>1.3 Redox reactions: inner and outer sphere mechanisms, complimentary and non-complimentary reactions.</p> <p>1.4 Stereochemistry of substitution reactions of octahedral complexes. (Isomerization and racemization reactions and applications.)</p>	
Unit II	Organometallic Chemistry of Transition metals	(15 L)
	<p>2.1. Eighteen and sixteen electron rule and electron counting with examples.</p> <p>2.2. Preparation and properties of the following compounds</p> <p>(a) Alkyl and aryl derivatives of Pd and Pt complexes</p> <p>(b) Carbenes and carbynes of Cr, Mo and W</p> <p>(c) Alkene derivatives of Pd and Pt</p> <p>(d) Alkyne derivatives of Pd and Pt</p> <p>(e) Allyl derivatives of nickel</p> <p>(f) Sandwich compounds of Fe, Cr and Half Sandwich compounds of Cr, Mo.</p> <p>2.3 Structure and bonding on the basis of VBT and MOT in the following organometallic compounds:</p> <p>Zeise's salt, bis(triphenylphosphine)diphenylacetylene platinum(0) $(Pt(PPh_3)_2(HC\equiv CPh)_2)$, diallylnickel(II), ferrocene and bis(arene)chromium(0), tricarbonyl $(\eta^2\text{-butadiene})$ iron(0).</p>	
Unit III	Environmental Chemistry	(15 L)
	<p>3.1. Conception of Heavy Metals: Critical discussion on heavy metals</p> <p>3.2. Toxicity of metallic species: Mercury, lead, cadmium, arsenic, copper and chromium, with respect to their sources, distribution, speciation, biochemical effects and toxicology, control and treatment.</p> <p>3.3. Case Studies:</p> <p>(a) Itai-itai disease for Cadmium toxicity,</p>	<p>(8)</p> <p>(2)</p>

	(b) Arsenic Poisoning in the Indo-Bangladesh region. 3.4. Interaction of radiation in context with the environment: Sources and biological implication of radioactive materials. Effect of low level radiation on cells- Its applications in diagnosis and treatment, Effect of radiation on cell proliferation and cancer.	(5)
Unit IV	Bioinorganic Chemistry	(15)
	4.1. Biological oxygen carriers; hemoglobin, hemerythrene and hemocyanine-structure of metal active center and differences in mechanism of oxygen binding, Differences between hemoglobin and myoglobin: Cooperativity of oxygen binding in hemoglobin and Hill equation, pH dependence of oxygen affinity in hemoglobin and myoglobin and it's implications. 4.2. Activation of oxygen in biological system with examples of mono-oxygenases, and oxidases- structure of the metal center and mechanism of oxygen activation by these enzymes. 4.3. Copper containing enzymes- superoxide dismutase, tyrosinase and laccase: catalytic reactions and the structures of the metal binding site 4.4. Nitrogen fixation-nitrogenase, hydrogenases 4.5. Metal ion transport and storage: Ionophores, transferrin, ferritin and metallothionins Medicinal applications of cis-platin and related compounds

Inorganic Chemistry Practical-II

Paper II

Course Code: RPSCHEP 202

Ores and Alloys

- 1) Analysis of Devarda's alloy
- 2) Analysis of Cu – Ni alloy
- 3) Analysis of Tin Solder alloy
- 4) Analysis of Limestone.

Instrumentation

- 1) Estimation of Copper using Iodometric method Potentiometrically.
- 2) Estimation of Fe^{+3} solution using Ce(IV) ions Potentiometrically

Semester: II
Course Code: RPSCHE 203
Credits: 4
Paper III: Organic Chemistry

Unit I		(15 L)
	<p>1.1. Alkylation of Nucleophilic Carbon Intermediates:</p> <p>1.1.1. Generation of carbanion, kinetic and thermodynamic enolate formation, Regioselectivity in enolate formation, alkylation of enolates.</p> <p>1.1.2. Generation and alkylation of dianion, medium effects in the alkylation of enolates, oxygen versus carbon as the site of alkylation.</p> <p>1.1.3. Alkylation of aldehydes, ketones, esters, amides and nitriles.</p> <p>1.1.4. Nitrogen analogs of enols and enolates- Enamines and Imines anions, alkylation of enamines and imines.</p> <p>1.1.5. Alkylation of carbon nucleophiles by conjugate addition (Michael reaction).</p> <p>1.2. Reaction of carbon nucleophiles with carbonyl groups:</p> <p>1.2.1. Mechanism of Acid and base catalyzed Aldol condensation, Mixed Aldol condensation with aromatic aldehydes, regiochemistry in mixed reactions of aliphatic aldehydes and ketones, intramolecular Aldol reaction and Robinson annulation.</p> <p>1.2.2. Addition reactions with amines and iminium ions; Mannich reaction.</p> <p>1.2.3. Amine catalyzed condensation reaction: Knoevenagel reaction.</p> <p>1.2.4. Acylation of carbanions.</p> <p>(Reference Books: 1-11)</p>	<p>(7 L)</p> <p>(8 L)</p>
Unit II	Reactions and Rearrangements	(15 L)
	<p>Mechanisms, stereochemistry (if applicable) and applications of the following:</p> <p>2.1. Reactions: Baylis-Hilman reaction, McMurry Coupling, Corey-Fuchs reaction, Nef reaction, Passerini reaction.</p> <p>2.2. Concerted rearrangements: Hofmann, Curtius, Lossen, Schmidt, Wolff, Boulton-Katritzky.</p> <p>2.3. Cationic rearrangements: Tiffeneau-Demjanov, Pummerer, Dienone-phenol, Rupe, Wagner-Meerwein.</p> <p>2.4. Anionic rearrangements: Brook, Neber, Von Richter, Wittig, Gabriel-Colman, Payne.</p> <p>(Reference Books: 19-22)</p>	

Unit III		(15 L)
	<p>3.1. Introduction to Molecular Orbital Theory for Organic Chemistry:</p> <p>3.1.1. Molecular orbitals: Formation of σ- and π-MOs by using LCAO method. Formation of π MOs of ethylene, butadiene, 1, 3, 5-hexatriene, allyl cation, anion and radical. Concept of nodal planes and energies of π-MOs</p> <p>3.1.2. Introduction to FMOs: HOMO and LUMO and significance of HOMO-LUMO gap in absorption spectra as well as chemical reactions. MOs of formaldehyde: The effect of electronegativity perturbation and orbital polarization in formaldehyde. HOMO and LUMO (π and π^* orbitals) of formaldehyde. A brief description of MOs of nucleophiles and electrophiles. Concept of 'donor-acceptor' interactions in nucleophilic addition reactions on formaldehyde. Connection of this HOMO-LUMO interaction with 'curved arrows' used in reaction mechanisms. The concept of hardness and softness and its application to electrophiles and nucleophiles. Examples of hard and soft nucleophiles/electrophiles. Identification of hard and soft reactive sites on the basis of MOs.</p> <p>3.1.3. Application of FMO concepts in (a) S_N^2 reaction, (b) Lewis acid base adducts (BF_3-NH_3 complex), (c) ethylene dimerization to butadiene, (d) Diels-Alder cycloaddition, (e) regioselective reaction of allyl cation with allyl anion (f) addition of hydride to formaldehyde.</p> <p>3.2. Applications of UV and IR spectroscopy:</p> <p>3.2.1. Ultraviolet spectroscopy: Recapitulation, UV spectra of dienes, conjugated polyenes (cyclic and acyclic), carbonyl and unsaturated carbonyl compounds, substituted aromatic compounds. Factors affecting the position and intensity of UV bands – effect of conjugation, steric factor, pH, and solvent polarity. Calculation of absorption maxima for above classes of compounds by Woodward-Fieser rules (using Woodward-Fieser tables for values for substituents).</p> <p>3.2.2. Infrared spectroscopy: Fundamental, overtone and combination bands, vibrational coupling, factors affecting vibrational frequency (atomic weight, conjugation, ring size, solvent and hydrogen bonding). Characteristic vibrational frequencies for alkanes, alkenes, alkynes, aromatics, alcohols, ethers, phenols, amines, nitriles and nitro compounds. Detailed study of vibrational frequencies of carbonyl compounds, aldehydes, ketones, esters, amides, acids, acid halides, anhydrides, lactones, lactams and conjugated carbonyl compounds.</p>	(7 L)
		(8L)
Unit IV	NMR spectroscopy and Mass spectrometry	(15)
	<p>4.1. Proton magnetic resonance spectroscopy: Principle, Chemical shift, Factors affecting chemical shift (Electronegativity, H-bonding, Anisotropy effects). Chemical and magnetic equivalence, Chemical shift values and correlation for protons bonded to carbon and other nuclei as in</p>	

	<p>alcohols, phenols, enols, carboxylic acids, amines, amides. Spin-spin coupling, Coupling constant (J), Factors affecting J, geminal, vicinal and long range coupling (allylic and aromatic). First order spectra, Karplus equation.</p> <p>4.2. ¹³C NMR spectroscopy: Theory and comparison with proton NMR, proton coupled and decoupled spectra, off-resonance decoupling. Factors influencing carbon shifts, correlation of chemical shifts of aliphatic, olefin, alkyne, aromatic and carbonyl carbons.</p> <p>4.3. Mass spectrometry: Molecular ion peak, base peak, isotopic abundance, metastable ions. Nitrogen rule, Determination of molecular formula of organic compounds based on isotopic abundance and HRMS. Fragmentation pattern in various classes of organic compounds (including compounds containing hetero atoms), McLafferty rearrangement, Retro-Diels-Alder reaction, ortho effect.</p> <p>4.4. Structure determination involving individual or combined use of the above spectral techniques.</p> <p>(Reference Books: 13-18)</p>

Organic Chemistry Practical-II

Paper III

Course Code: RPSCHEP 203

Separation of Binary mixture using micro-scale technique

1. Separation of binary mixture using physical and chemical methods.
2. Characterization of one of the components with the help of chemical analysis and confirmation of the structure with the help of derivative preparation and its physical constant.
3. Purification and determination of mass and physical constant of the second component.

The following types are expected:

- (i) Water soluble/water insoluble solid and water insoluble solid,
- (ii) Non-volatile liquid-Non-volatile liquid (chemical separation)
- (iii) Water-insoluble solid-Non-volatile liquid.

Minimum three mixtures from each type and a total of ten mixtures are expected.

5. Advance Practical Organic Chemistry, N.K. Vishnoi, Vikas Publication

Semester: II
Course Code: RPSCHE 204
Credits: 4

Paper IV: Analytical Chemistry-II

Unit I	Chromatography	(15 L)
	<p>1.1 Recapitulation of basic concepts in chromatography: Classification of chromatographic methods, requirements of an ideal detector, types of detectors in LC and GC, comparative account of detectors with reference to their applications (LC and GC respectively), qualitative and quantitative analysis. (2 L)</p> <p>1.2 Concept of plate and rate theories in chromatography: efficiency, resolution, selectivity and separation capability. Van Deemter equation and broadening of chromatographic peaks. Optimization of chromatographic conditions. (5 L)</p> <p>1.3 Gas Chromatography: Instrumentation of GC with special reference to sample injection systems – split/splitless, column types, solid/ liquid stationary phases, column switching techniques, temperature programming, Thermionic and mass spectrometric detector, Applications. (3 L)</p> <p>1.4 High Performance Liquid Chromatography (HPLC): Normal phase and reversed phase with special reference to types of commercially available columns (Use of C8 and C18 columns). Diode array type and fluorescence detector, Applications of HPLC. Chiral and ion chromatography. (5 L)</p>	
Unit II		(15 L)
	<p>2.1 X-ray spectroscopy: principle, instrumentation and applications of X-ray fluorescence, absorption and diffraction spectroscopy. (4 L)</p> <p>2.2 Mass spectrometry: recapitulation, instrumentation, ion sources for molecular studies, electron impact, field ionization, field absorption, chemical ionization and fast atom bombardment sources. Mass analyzers: Quadrupole, time of flight and ion trap. Applications. (6 L)</p> <p>2.3 Radioanalytical Methods – recapitulation, isotope dilution method, introduction, principle, single dilution method, double dilution method and applications. (5 L)</p>	
Unit III		(15 L)
	<p>3.1 Surface Analytical Techniques – Introduction, Principle, Instrumentation and Applications of: 3.1.1 Scanning Electron Microscopy (SEM)</p>	(9 L)

	<p>3.1.2 Scanning Tunneling Microscopy (STM)</p> <p>3.1.3 Transmission Electron Microscopy (TEM)</p> <p>3.1.4 Electron Spectroscopy (ESCA and Auger)</p> <p>3.2 Atomic Spectroscopy</p> <p>3.2.1 Advantages and Limitations of AAS</p> <p>3.2.2 Atomic Spectroscopy based on plasma sources – Introduction, Principle, Instrumentation and Applications.</p>	(6 L)
Unit IV	Electroanalytical Methods	
	<p>4.1 Ion selective potentiometry and Polarography:</p> <p>Ion selective electrodes and their applications (solid state, precipitate, liquid –liquid, enzyme and gas sensing electrodes), ion selective field effect transistors, biocatalytic membrane electrodes and enzyme based biosensors.</p> <p>Polarography: Ilkovic equation, derivation starting with Cottrell equation, effect of complex formation on the polarographic waves.</p> <p>4.2 Electrogravimetry: Introduction, principle, instrumentation, factors affecting the nature of the deposit, applications.</p> <p>4.3 Coulometry: Introduction, principle, instrumentation, coulometry at controlled potential and controlled current</p> <p>(Numericals are Expected)</p>	(10 L)
		(3 L)
		(2 L)

Analytical Chemistry Practical-II

Paper IV

Course Code: RPSCHEP 204

1. To determine percentage purity of sodium carbonate in washing soda pH metrically.
2. To determine amount of Ti(III) and Fe(II) in a mixture by titration with Ce(IV) potentiometrically.
3. To determine the percentage purity of a sample (glycine/sodium benzoate/primary amine) by titration with perchloric acid in a non aqueous medium using glass calomel system potentiometrically.
4. To determine the amount of nitrite present in the given water sample colorimetrically.
5. To determine the amount of Fe(II) and Fe(III) in a mixture using 1,10-phenanthroline spectrophotometrically.
6. Simultaneous determination of Cr(VI) and Mn(VII) in a mixture spectrophotometrically.
7. To determine the percentage composition of HCl and H₂SO₄ on weight basis in a mixture of two by conductometric titration with NaOH and BaCl₂.
8. To determine amount of potassium in the given sample of fertilizers using flame photometer by standard addition method.

Modality of Assessment:

Theory Examination Pattern:

A) Internal Assessment - 40%

Theory

40 marks

Sr No	Evaluation type	Marks
1	Presentation	20
2	Assignment	10
3	Active participation	10

B) External examination - 60 %

Semester End Theory Assessment - 60%

60 marks

- i. Duration - These examinations shall be of **two and half hours** duration.
- ii. Theory question paper pattern: -There shall be **four** questions each of **15** marks, one on each unit. All questions shall be compulsory with internal choice within the questions.

Questions	Options	Marks	Questions on
Q.1)a)	Any 3 out of 5	12	Unit I
Q.1)b)	Any 1 out of 2	3	
Q.2)a)	Any 3 out of 5	12	Unit II
Q.2)b)	Any 1 out of 2	3	
Q.3)a)	Any 3 out of 5	12	Unit III
Q.3)b)	Any 1 out of 2	3	
Q.4)a)	Any 3 out of 5	12	Unit IV
Q.4)b)	Any 1 out of 2	3	

Practical Examination

Practical examination of each paper for 50 marks will be held for three and half hours

Practical 40M
Journal 05M

Viva-voce 05M
Total 50M
